<b>1</b>	<b>FTGL User Guide</b>	<b>3</b>
1.1	Introduction . . . . .	3
1.2	Documentation . . . . .	3
1.3	Additional information . . . . .	4
<b>2</b>	<b>Frequently Asked Questions</b>	<b>5</b>
2.1	FAQ . . . . .	5
2.1.1	When I try to compile %FTGL it complains about a missing file from the include: #include <ft2build.h> . . . . .	5
2.1.2	Is it possible to map a font to a "unit" size? My application relies on the fonts being a certain "physical" height (in OpenGL coordinate space) rather than a point size in display space. Any thoughts/suggestions? . . . . .	5

# Chapter 1

## FTGL User Guide

### 1.1 Introduction

OpenGL doesn't provide direct font support, so the application must use any of OpenGL's other features for font rendering, such as drawing bitmaps or pixmaps, creating texture maps containing an entire character set, drawing character outlines, or creating a 3D geometry for each character.

More information can be found on the OpenGL website:

- <http://www.opengl.org/resources/faq/technical/fonts.htm>
- <http://www.opengl.org/resources/features/fontsurvey/>

Most of these systems require a pre-processing stage to take the native fonts and convert them into a proprietary format.

FTGL was born out of the need to treat fonts in OpenGL applications just like any other application. For example when using Adobe Photoshop or Microsoft Word you don't need an intermediate pre-processing step to use high quality scalable fonts.

### 1.2 Documentation

- **FTGL tutorial** (p. ??)
- C API reference:
  - **FTGlyph.h** (p. 93)
  - **FTFont.h** (p. 80)
  - **FTLayout.h** (p. 96)

pt3em

- C++ API reference:
  - class **FTGlyph** (p. 47)
  - class **FTFont** (p. 37)
  - class **FTLayout** (p. 50)

## 1.3 Additional information

- **Frequently Asked Questions** (p. ??)
- **Projects using FTGL** (p. ??)

## Chapter 2

# Frequently Asked Questions

### 2.1 FAQ

#### 2.1.1 When I try to compile %FTGL it complains about a missing file from the include: #include <ft2build.h>

FTGL relies on FreeType 2 for opening and decoding font files. This include is the main include for FreeType. You will need to download Freetype 2 and install it. Then make sure that the FTGL project that you are using points to your FreeType installation.

#### 2.1.2 Is it possible to map a font to a "unit" size? My application relies on the fonts being a certain "physical" height (in OpenGL coordinate space) rather than a point size in display space. Any thoughts/suggestions?

We can do anything:) It would be easy to allow you to set the size in pixels, though I'm not sure this is what you want. Setting the size to 'OpenGL units' may be a bit harder. What does 1.0 in opengl space mean and how does that relate to point size? For one person it might mean scaling the font up, for someone else it may mean scaling down. Plus bitmaps and pixmaps have a pixel to pixel relationship that you can't change.

Here's some guidelines for vector and texture fonts. Take note that I say 'should' a lot :)

- One point in pixel space maps to 1 unit in OpenGL space, so a glyph that is 18 points high should be 18.0 units high.
- If you set an ortho projection to the window size and draw a glyph it's screen size should be the correct physical size ie a 72 point glyph on a 72dpi screen will be 1 inch high. Also if you set a perspective projection that maps 0.0 in the z axis to screen size you will get the same eg.

```
gluPerspective(90, window_height / 2 , small_number, large_number);
```

So basically it all depends on your projection matrix. Obviously you can use glScale but I understand if you don't want to.

Couple of extra things to note:

- The quality of vector glyphs will not change when you change the size, ie. a really small polygon glyph up close will look exactly the same as a big one from far away. They both contain the same amount of data. This doesn't apply to texture fonts.
- Secondly, there is a bug in the advance/kerining code that will cause ugliness at really small point sizes. This is because the advance and kerning use ints so an advance of 0.4 will become zero. If this is going to be a problem, I can fix this.

pt3em

Early on I did a lot of head scratching over the OpenGL unit to font size thing because when I was first integrating FTGL into my engine the fonts weren't the size I was expecting. I was tempted to build in some scaling but I decided doing nothing was the best approach because you can't please everyone. Plus it's 'correct' as it is.

## Chapter 3

# Projects using FTGL

To add your project to this list, please contact one of the FTGL developers at <http://sf.net/projects/ftgl>. Projects are listed in alphabetical order.

### 3.1 %FTGL language bindings

#### 3.1.1 %FTGL#

FTGL# (<http://www.paskaluk.com/projects.php>) is a collection of .NET bindings for FTGL.

#### 3.1.2 GiGuiA

GiGuiA (<http://sourceforge.net/projects/glguia/>) is a set of packages for Ada 2006 that can be used to create Graphical User Interfaces, relaying (almost) only on OpenGL. Hence should be rather platform-independent.

#### 3.1.3 Ruby %FTGL

Ruby FTGL# (<http://rubyforge.org/projects/ruby-ftgl/>) is a collection of Ruby bindings for FTGL.

#### 3.1.4 PyFTGL

PyFTGL (<http://code.google.com/p/pyftgl/>) wraps the functionality of FTGL into a Python module so that it can be used in conjunction with PyOpenGL.

### 3.2 Projects currently using %FTGL

#### 3.2.1 Agent World

Agent World (<http://code.google.com/p/agentw/>) provides tools for simulating and visualizing multi-agent systems and is specially designed for testing machine learning applications (and specially focused on Case Based Reasoning ones). It includes support for representing information using the Feature Term formalism, and provides a series of relational machine learning algorithms that can deal with them. The whole project is created in C++ to maximize efficiency, and uses OpenGL as the visualization library to ensure cross-platformness.

pt3em

### 3.2.2 Amaltheia

Amaltheia (<http://home.gna.org/amaltheia/>) is a cross-platform game programming API that supports two backends, OpenGL and DirectX. The aim of the Amaltheia project is to create an intuitive and simple to use library, providing core 3d and 2d functionality in a platform independent manner. It also provides platform independence regarding basic network functions, input handling, threads and sound. Currently the GNU/Linux and the Windows OSes are supported.

### 3.2.3 Armagetron Advanced

Armagetron Advanced (<http://www.armagetronad.net/>) is a multiplayer game in 3d that attempts to emulate and expand on the lightcycle sequence from the movie Tron. It's an old school arcade game slung into the 21st century. Highlights include a customizable playing arena, HUD, unique graphics, and AI bots. For the more advanced player there are new game modes and a wide variety of physics settings to tweak as well.

### 3.2.4 Audicle

Audicle (<http://audicle.cs.princeton.edu/>) is an audio programming environment that integrates the programmability of the development environment with elements of the runtime environment. The result is a duct-taped intersection of a concurrent smart editor, compiler, virtual machine, and debugger.

### 3.2.5 Battlestar T.U.X.

Battlestar T.U.X. (<http://code.google.com/p/battlestar-tux/>) is a top-down scrolling shooter project.

### 3.2.6 BJS

BJS (<http://bjs.sourceforge.net/>) is a funny arcade 3D multiplayer tank battle. It is fully playable and very fun in multiplayer. Of course the single player is also possible. There is no story. You just get a tank and go shoot other players. Currently there are 5 different tanks, 6 maps, 9 powerups and 4 weapons.

### 3.2.7 Blender

Blender (<http://blender.org/>) is an integrated 3d suite for modelling, animation, rendering, post-production, interactive creation and playback (games).

### 3.2.8 Breve

Breve (<http://www.spiderland.org/>) is a free, open-source software package which makes it easy to build 3D simulations of multi-agent systems and artificial life. Using Python, or using a simple scripting language called steve, you can define the behaviors of agents in a 3D world and observe how they interact. breve includes physical simulation and collision detection so you can simulate realistic creatures, and an OpenGL display engine so you can visualize your simulated worlds.

### 3.2.9 BZFlag

BZFlag (<http://BZFlag.org/>) is a 3D multi-player multiplatform tank battle game that allows users to play against each other in a network environment.

pt3em

BZFlag uses FTGL as of version 2.99.

### 3.2.10 Capture The Flag

Capture The Flag (<http://capturetf.sourceforge.net/>) is an open source, multi-platform, network game project.

### 3.2.11 Cello

Cello (<http://common-lisp.net/project/cello/>) is a project to create an open-source, industrial-strength, portable GUI toolkit for Common Lisp. Its features include anti-aliased fonts, accelerated 2d- and 3d-graphics, a standard set of GUI widgets, easy construction of new widgets, and much more. Cello heavily utilizes Cells (a sister project on common-lisp.net), in addition to industry-standard technologies such as OpenGL, Free-Type, and ImageMagick.

### 3.2.12 Chimera

Chimera (<http://www.cgl.ucsf.edu/chimera/>) is a highly extensible program for interactive visualization and analysis of molecular structures and related data, including density maps, supramolecular assemblies, sequence alignments, docking results, trajectories, and conformational ensembles. High-quality images and animations can be generated.

### 3.2.13 Cinepaint

Cinepaint (<http://www.cinepaint.org/>) is a deep paint image retouching tool that supports higher color fidelity than ordinary painting tools.

### 3.2.14 Duel

Duel (<http://www.personal.rdg.ac.uk/~sir03me/play/code.html>) is a small overhead perspective spaceship game.

### 3.2.15 Empty Clip

Empty Clip (<http://emptyclip.sourceforge.net/>) is a top-down 2D Action RPG.

### 3.2.16 Freebox

Freebox (<http://freebox.sourceforge.net/>) is designed for use in a special type of computer called an 'HTPC', which is connected to a home-theatre system to watch XviD/DivX/DVD movies, play music (MP3, CD, whatever), play some emulated games, or whatever else you want to do with it.

### 3.2.17 Gem

Gem (<http://gem.iem.at/>) is a loadable library for puredata, which adds OpenGL graphics rendering and animation to Pd. Pd is a graphical programming language and computer music system.

pt3em

### 3.2.18 GLMayan

GLMayan (<http://glmayan.sourceforge.net/>) is an OpenGL screensaver.

### 3.2.19 Glover

Glover (<http://code.google.com/p/glover/>) is a movie player that renders the content using OpenGL allowing all kinds of special effects using fragment shaders. The movie decoding is done using ffmpeg.

### 3.2.20 Ivf++

Ivf++ (<http://ivfplusplus.sourceforge.net/>) is a C++ library encapsulating OpenGL functionality. The primary goal is to make it easier to use the OpenGL library in interactive 3D applications. The second goal is extendibility, providing a set of well defined base classes for different object types to build new classes on. The third goal is portability, primarily between Linux and Windows, but the library should also be easily ported to Mac OS X.

### 3.2.21 Jahshaka

Jashaka (<http://jahshaka.org/>) is an advanced video editing, animation, visual effects, painting and music tool.

### 3.2.22 Karaoke FX

Karaoke FX (<http://jeanchristophe.duber.free.fr/karaokefx/>) is a midifile player that can display lyrics in synch with the sound so as it can be used for karaoke. It relies on plugins for midi output devices as for lyrics display.

### 3.2.23 Libinstrudeo

Libinstrudeo (<http://sourceforge.net/projects/libinstrudeo>), initially written for the ScreenKast program, provides the necessary logic to capture screen recordings and to process them. Includes a soap-client for the webservice at captorials.com that enables you to share your recordings.

### 3.2.24 Light Speed!

Light Speed! (<http://lightspeed.sourceforge.net/>) is an OpenGL-based program which illustrates the effects of special relativity on the appearance of moving objects. When an object accelerates past a few million meters per second, these effects begin to grow noticeable, becoming more and more pronounced as the speed of light is approached. These relativistic effects are viewpoint-dependent, and include shifts in length, object hue, brightness and shape.

### 3.2.25 MySQL GUI Tools

MySQL GUI Tools (<http://dev.mysql.com/downloads/gui-tools/5.0.html>) is a collection of tools for the MySQL database. It consists of MySQL Administrator, MySQL Query Browser and MySQL Migration Toolkit.

pt3em

### 3.2.26 OctPlot

OctPlot (<http://octplot.sourceforge.net/>) is a graphics package for Octave, the free alternative to MATLAB. It provides high quality PostScript and on-screen graphics.

### 3.2.27 Open ActiveWrl

Open ActiveWrl (<http://open-activewrl.sourceforge.net/>) is a software development toolkit based on a generic software development approach that allows the implementation VRML/X3D browser components. These browser components can run within an conventional application or can be linked together for the implementation of parallel immersive VR setups.

### 3.2.28 OpenEagles

OpenEagles (<http://www.openeaagles.org/>) is a multi-platform simulation framework targeted to help simulation engineers and software developers build robust, scalable, virtual, constructive, stand-alone, and distributed simulation applications. It has been used extensively to build applications that demand real-time performance. This includes applications to conduct human factor studies, operator training, and the development of complete distributed virtual simulation systems. OpenEagles has also been used to build stand-alone and distributed constructive applications oriented at system analysis.

### 3.2.29 OpenGC

OpenGC (<http://www.opengc.org/>) is a multi-platform, multi-simulator, open-source C++ tool for developing and implementing high quality glass cockpit displays for simulated flightdecks.

### 3.2.30 OpenSG

OpenSG (<http://www.opensg.org/>) is a portable scenegraph system to create realtime graphics programs, e.g. for virtual reality applications.

### 3.2.31 Panthera

Panthera (<http://sourceforge.net/projects/panthera>) is a C++ framework for interactive visualization, manipulation, and editing of volume data. Applications developed on top of Panthera can utilize both desktop and immersive user interface devices, such as position trackers and haptic displays.

### 3.2.32 Planet Penguin Racer

PlanetPenguin Racer (<http://developer.berlios.de/projects/ppracer/>) is a simple OpenGL racing game featuring Tux, the Linux mascot. The goal of the game is to slide down a snow- and ice-covered mountain as quickly as possible, avoiding the trees and rocks that will slow you down.

### 3.2.33 projectM

projectM (<http://projectm.sourceforge.net/>) is a music visualizer which uses OpenGL for hardware acceleration. It is compatible with Milkdrop presets.

pt3em

### 3.2.34 Puzzle Bobble 3D

Puzzle Bobble 3D (<http://homepage.mac.com/eric.lee/puzzle/>) is a 3D video game for Linux. The game is similar to Tetris/Connect 4: connect balls of the same colour to make them disappear. Puzzle Bobble 3D is based on an already popular arcade game of the same name by Taito Corporation (see links section at the bottom of this page), but this particular variant is played in a 3D environment (hence the name).

### 3.2.35 ROOT

ROOT (<http://root.cern.ch/>) is an object-oriented data analysis framework.

### 3.2.36 SCIRun

SCIRun (<http://software.sci.utah.edu/scirun.html>) is a Problem Solving Environment (PSE), for modeling, simulation and visualization of scientific problems. It is available for free and open source.

### 3.2.37 TINE

TINE, or TINE Is Not ELITE (<http://tine.sunsite.dk/en/index.html>) is an open source cross-platform remake of the classic space adventure game ELITE.

### 3.2.38 Tiny Planet

Tiny Planet (<http://www.duberga.net/tinyplanet/>) is a real-time OpenGL viewer of detailed earth texture such as BlueMarble from Earth Observatory (NASA) or any other planet texture. Vectorial data such as points of interest, boundaries, rivers can be superimposed to the texture.

### 3.2.39 Truevision

Truevision (<http://truevision.sourceforge.net/>) is a 3D modeler for GNOME.

### 3.2.40 Tulip

Tulip (<http://tulip.labri.fr/>) is a system dedicated to the visualization of huge graphs. It is capable of managing graphs with up to 500,000 nodes and edges on relatively modest hardware (eg. 600MHz Pentium III, 256MB RAM).

### 3.2.41 Ubit

Ubit (<http://www.infres.enst.fr/~elc/ubit/>) Ubit is a new GUI toolkit that combines the advantages of scene graph and widget based toolkits. The Ubit3D extension makes it possible to display 2D GUIs in a 3D space.

### 3.2.42 VRS

The Virtual Rendering System (<http://www.hpi.uni-potsdam.de/vrs/>) is a computer graphics software library for constructing interactive 3D applications. It provides a large collection of 3D rendering components which facilitate implementing 3D graphics applications and experimenting with 3D graphics and imaging algorithms.

## pt3em

### 3.2.43 VTK

VTK, the Visualization Toolkit (<http://www.vtk.org/>), is an object oriented, high level library that allows one to easily write C++ programs, Tcl, Python and Java scripts that do 3D visualization.

### 3.2.44 XLock

XLock (<http://www.tux.org/~bagleyd/xlockmore.html>) is a screensaver and screen locking utility with additional OpenGL and XPM modes.

## 3.3 Projects that used to use %FTGL

### 3.3.1 GNU Backgammon

GNU Backgammon (<http://www.gnubg.org/>) was using FTGL until version 0.14.3+20060520-1.

### 3.3.2 OpenSceneGraph

OpenSceneGraph (<http://www.openscenegraph.org/projects/osg>) is an open source high performance 3D graphics toolkit, used by application developers in fields such as visual simulation, games, virtual reality, scientific visualization and modelling. Written entirely in Standard C++ and OpenGL it runs on all Windows platforms, OSX, GNU/Linux, IRIX, Solaris, HP-Ux, AIX and FreeBSD operating systems.

### 3.3.3 Teddy

Teddy (<http://teddy.sourceforge.net/>) was a 3D graphics library. The main purpose was to be a simple scene graph manager.

### 3.3.4 VigiPac

VigiPac (<http://vigipac.sourceforge.net/>) was a three-dimensional Pacman clone with multiplayer support, written in the C++ language.

pt3em

## Chapter 4

# FTGL tutorial

### 4.1 Starting to use %FTGL

Only one header is required to use FTGL:

```
#include <FTGL/ftgl.h>
```

### 4.2 Choosing a font type

FTGL supports 6 font output types among 3 groups: raster fonts, vector fonts, and texture fonts which are a mixture of both. Each font type has its advantages and disadvantages.

#### 4.2.1 Raster fonts

Raster fonts are made of pixels painted directly on the viewport's framebuffer. They cannot be directly rotated or scaled.

- Bitmap fonts use 1-bit (2-colour) rasterised glyphs.
- Pixmap fonts use 8-bit (256 levels) rasterised glyphs.

***This is a GLBitmapFont object.***  
***This is a GLPixmapFont object.***

#### 4.2.2 Vector fonts

Vector fonts are 3D objects that are rendered at the current matrix location. All position, scale, texture and material effects apply to vector fonts.

- Polygon fonts use planar triangle meshes and can be texture-mapped.
- Outline fonts use OpenGL lines.
- Extruded fonts are extruded polygon fonts, with the front, back and side meshes renderable separately to apply different effects and materials.

pt3em

### 4.2.3 Textured fonts

Textured fonts are probably the most versatile types. They are fast, antialiased, and can be transformed just like any OpenGL primitive.

- Texture fonts use one texture per glyph. They are fast because glyphs are stored permanently in the video card's memory.
- Buffer fonts use one texture per line of text. They tend to be faster than texture fonts when the same line of text needs to be rendered for more than one frame.

## 4.3 Create font objects

Creating a font and displaying some text is really straightforward, be it in C or in C++.

### 4.3.1 in C

```
/* Create a pixmap font from a TrueType file. */
FTGLFont *font = ftglCreatePixmapFont("/home/user/Arial.ttf");

/* If something went wrong, bail out. */
if(!font)
    return -1;

/* Set the font size and render a small text. */
ftglSetFontFaceSize(font, 72, 72);
ftglRenderFont(font, "Hello World!", FTGL_RENDER_ALL);

/* Destroy the font object. */
ftglDestroyFont(font);
```

### 4.3.2 in C++

```
// Create a pixmap font from a TrueType file.
FTGLPixmapFont font("/home/user/Arial.ttf");

// If something went wrong, bail out.
if(font.Error())
```

```

pt3em
    return -1;

// Set the font size and render a small text.
font.FaceSize(72);
font.Render("Hello World!");

```

The first 128 glyphs of the font (generally corresponding to the ASCII set) are preloaded. This means that usual text is rendered fast enough, but no memory is wasted loading glyphs that will not be used.

## 4.4 More font commands

### 4.4.1 Font metrics

If you ask a font to render at 0.0, 0.0 the bottom left most pixel or polygon may not be aligned to 0.0, 0.0. With **FTFont::Ascender()** (p. 41), **FTFont::Descender()** (p. 44) and **FTFont::Advance()** (p. 40) an approximate bounding box can be calculated.

For an exact bounding box, use the **FTFont::BBox()** (p. 41) function. This function returns the extent of the volume containing 'string'. 0.0 on the y axis will be aligned with the font baseline.

### 4.4.2 Specifying a character map encoding

From the FreeType documentation:

"By default, when a new face object is created, (FreeType) lists all the charmaps contained in the font face and selects the one that supports Unicode character codes if it finds one. Otherwise, it tries to find support for Latin-1, then ASCII."

It then gives up. In this case FTGL will set the charmap to the first it finds in the fonts charmap list. You can explicitly set the char encoding with **FTFont::CharMap()** (p. 43).

Valid encodings as of FreeType 2.0.4 are:

- ft\_encoding\_none
- ft\_encoding\_unicode
- ft\_encoding\_symbol
- ft\_encoding\_latin\_1
- ft\_encoding\_latin\_2
- ft\_encoding\_sjis
- ft\_encoding\_gb2312

pt3em

- ft\_encoding\_big5
- ft\_encoding\_wansung
- ft\_encoding\_johab
- ft\_encoding\_adobe\_standard
- ft\_encoding\_adobe\_expert
- ft\_encoding\_adobe\_custom
- ft\_encoding\_apple\_roman

For instance:

```
font.CharMap(ft_encoding_apple_roman);
```

This will return an error if the requested encoding can't be found in the font.

If your application uses Latin-1 characters, you can preload this character set using the following code:

```
// Create a pixmap font from a TrueType file.
FTGLPixmapFont font("/home/user/Arial.ttf");

// If something went wrong, bail out.
if(font.Error())
    return -1;

// Set the face size and the character map. If something went wrong, bail out.
font.FaceSize(72);
if(!font.CharMap(ft_encoding_latin_1))
    return -1;

// Create a string containing all characters between 128 and 255
// and preload the Latin-1 chars without rendering them.
char buf[129];

#### 6.1.1 Detailed Description

**FTBBBox** (p. 23) is a convenience class for handling bounding boxes.

Definition at line 42 of file FTBBBox.h.

pt3em

## 6.1.2 Constructor & Destructor Documentation

### 6.1.2.1 FTBBBox::FTBBBox ( ) [inline]

Default constructor.

Bounding box is set to zero.

Definition at line 48 of file FTBBBox.h.

### 6.1.2.2 FTBBBox::FTBBBox ( float *lx*, float *ly*, float *lz*, float *ux*, float *uy*, float *uz* ) [inline]

Constructor.

Definition at line 56 of file FTBBBox.h.

### 6.1.2.3 FTBBBox::FTBBBox ( FTPoint *l*, FTPoint *u* ) [inline]

Constructor.

Definition at line 64 of file FTBBBox.h.

### 6.1.2.4 FTBBBox::FTBBBox ( FT\_GlyphSlot *glyph* ) [inline]

Constructor.

Extracts a bounding box from a freetype glyph. Uses the control box for the glyph. FT\_Glyph\_Get\_CBox ( )

pt3emParameters

pt3em	pt3emglyph	pt3emA freetype glyph
-------	------------	-----------------------

Definition at line 75 of file FTBBBox.h.

### 6.1.2.5 FTBBBox::~~FTBBBox ( ) [inline]

Destructor.

Definition at line 93 of file FTBBBox.h.

## 6.1.3 Member Function Documentation

### 6.1.3.1 void FTBBBox::Invalidate ( ) [inline]

Mark the bounds invalid by setting all lower dimensions greater than the upper dimensions.

Definition at line 100 of file FTBBBox.h.

### 6.1.3.2 bool FTBBBox::IsValid ( ) [inline]

Determines if this bounding box is valid.

pt3em

pt3emReturns

True if all lower values are  $\leq$  the corresponding upper values.

Definition at line 112 of file FTBBox.h.

**6.1.3.3 FTPoint const FTBBox::Lower ( ) const** [inline]

Definition at line 165 of file FTBBox.h.

Referenced by FTFont::BBox().

**6.1.3.4 FTBBox& FTBBox::operator+=( const FTPoint vector )** [inline]

Move the Bounding Box by a vector.

pt3emParameters

pt3empt3emvector	pt3emThe vector to move the bbox in 3D space.
------------------	---

Definition at line 124 of file FTBBox.h.

**6.1.3.5 FTBBox& FTBBox::operator|=( const FTBBox & bbox )** [inline]

Combine two bounding boxes.

The result is the smallest bounding box containing the two original boxes.

pt3emParameters

pt3em pt3embbox	pt3emThe bounding box to merge with the second one.
-----------------	---

Definition at line 138 of file FTBBox.h.

References FTPoint::X(), FTPoint::Y(), and FTPoint::Z().

**6.1.3.6 void FTBBox::SetDepth ( float depth )** [inline]

Definition at line 150 of file FTBBox.h.

**6.1.3.7 FTPoint const FTBBox::Upper ( ) const** [inline]

Definition at line 159 of file FTBBox.h.

Referenced by FTFont::BBox().

The documentation for this class was generated from the following file:

- **FTBBox.h**

pt3em

## 6.2 FTBitmapFont Class Reference

**FTBitmapFont** (p. 26) is a specialisation of the **FTFont** (p. 37) class for handling Bitmap fonts.

```
#include <FTGLBitmapFont.h>
```

Inheritance diagram for FTBitmapFont:

pt3em

### Public Member Functions

- **FTBitmapFont** (const char \*fontFilePath)  
*Open and read a font file.*
- **FTBitmapFont** (const unsigned char \*pBufferBytes, size\_t bufferSizeInBytes)  
*Open and read a font from a buffer in memory.*
- **~FTBitmapFont** ()  
*Destructor.*

### Protected Member Functions

- virtual **FTGlyph** \* **MakeGlyph** (FT\_GlyphSlot slot)  
*Construct a glyph of the correct type.*

#### 6.2.1 Detailed Description

**FTBitmapFont** (p. 26) is a specialisation of the **FTFont** (p. 37) class for handling Bitmap fonts.

pt3emSee also

**FTFont** (p. 37)

Definition at line 45 of file FTGLBitmapFont.h.

#### 6.2.2 Constructor & Destructor Documentation

##### 6.2.2.1 FTBitmapFont::FTBitmapFont ( const char \* fontFilePath )

Open and read a font file.

Sets Error flag.

```
@param fontFilePath font file path.
```

pt3em

#### 6.2.2.2 FTBitmapFont::FTBitmapFont ( const unsigned char \* *pBufferBytes*, size\_t *bufferSizeInBytes* )

Open and read a font from a buffer in memory.

Sets Error flag. The buffer is owned by the client and is NOT copied by **FTGL** (p. 21). The pointer must be valid while using **FTGL** (p. 21).

pt3emParameters

pt3em      pt3em <i>pBufferBytes</i>	pt3emthe in-memory buffer
pt3em <i>bufferSizeInBytes</i>	pt3emthe length of the buffer in bytes

#### 6.2.2.3 FTBitmapFont::~~FTBitmapFont ( )

Destructor.

### 6.2.3 Member Function Documentation

#### 6.2.3.1 virtual FTGlyph\* FTBitmapFont::MakeGlyph ( FT\_GlyphSlot *slot* ) [protected], [virtual]

Construct a glyph of the correct type.

Clients must override the function and return their specialised **FTGlyph** (p. 47).

pt3emParameters

pt3em      pt3em <i>slot</i>	pt3emA FreeType glyph slot.
------------------------------	-----------------------------

pt3emReturns

An FT\*\*\*Glyph or `null` on failure.

Implements **FTFont** (p. 45).

The documentation for this class was generated from the following file:

- **FTGLBitmapFont.h**

## 6.3 FTBitmapGlyph Class Reference

**FTBitmapGlyph** (p. 27) is a specialisation of **FTGlyph** (p. 47) for creating bitmaps.

```
#include <FTBitmapGlyph.h>
```

Inheritance diagram for FTBitmapGlyph:

pt3em

pt3em

## Public Member Functions

- **FTBitmapGlyph** (FT\_GlyphSlot glyph)  
*Constructor.*
- virtual **~FTBitmapGlyph** ()  
*Destructor.*
- virtual const **FTPoint & Render** (const **FTPoint** &pen, int renderMode)  
*Render this glyph at the current pen position.*

## Additional Inherited Members

### 6.3.1 Detailed Description

**FTBitmapGlyph** (p. 27) is a specialisation of **FTGlyph** (p. 47) for creating bitmaps.

Definition at line 42 of file FTBitmapGlyph.h.

### 6.3.2 Constructor & Destructor Documentation

#### 6.3.2.1 FTBitmapGlyph::FTBitmapGlyph ( FT\_GlyphSlot glyph )

Constructor.

pt3emParameters

pt3em pt3emglyph	pt3emThe Freetype glyph to be processed
------------------	---

#### 6.3.2.2 virtual FTBitmapGlyph::~~FTBitmapGlyph ( ) [virtual]

Destructor.

### 6.3.3 Member Function Documentation

#### 6.3.3.1 virtual const FTPoint& FTBitmapGlyph::Render ( const FTPoint & pen, int renderMode ) [virtual]

Render this glyph at the current pen position.

pt3emParameters

pt3em	pt3empen	pt3emThe current pen position.
	pt3em renderMode	pt3emRender mode to display

pt3em

#### pt3emReturns

The advance distance for this glyph.

Implements **FTGlyph** (p. 49).

The documentation for this class was generated from the following file:

- **FTBitmapGlyph.h**

## 6.4 FTBuffer Class Reference

**FTBuffer** (p. 29) is a helper class for pixel buffers.

```
#include <FTBuffer.h>
```

### Public Member Functions

- **FTBuffer** ()  
*Default constructor.*
- **~FTBuffer** ()  
*Destructor.*
- **FTPoint Pos** () const  
*Get the pen's position in the buffer.*
- void **Pos** (FTPoint arg)  
*Set the pen's position in the buffer.*
- void **Size** (int w, int h)  
*Set the buffer's size.*
- int **Width** () const  
*Get the buffer's width.*
- int **Height** () const  
*Get the buffer's height.*
- unsigned char \* **Pixels** () const  
*Get the buffer's direct pixel buffer.*

### 6.4.1 Detailed Description

**FTBuffer** (p. 29) is a helper class for pixel buffers.

It provides the interface between **FTBufferFont** (p. 31) and **FTBufferGlyph** (p. 33) to optimise rendering operations.

pt3emSee also

**FTBufferGlyph** (p. 33)  
**FTBufferFont** (p. 31)

Definition at line 45 of file FTBuffer.h.

### 6.4.2 Constructor & Destructor Documentation

#### 6.4.2.1 FTBuffer::FTBuffer ( )

Default constructor.

**pt3em****6.4.2.2 FTBuffer::~~FTBuffer ( )**

Destructor.

**6.4.3 Member Function Documentation****6.4.3.1 int FTBuffer::Height ( ) const [inline]**

Get the buffer's height.

**pt3emReturns**

The buffer's height, in pixels.

Definition at line 98 of file FTBuffer.h.

**6.4.3.2 unsigned char\* FTBuffer::Pixels ( ) const [inline]**

Get the buffer's direct pixel buffer.

**pt3emReturns**

A read-write pointer to the buffer's pixels.

Definition at line 105 of file FTBuffer.h.

**6.4.3.3 FTPoint FTBuffer::Pos ( ) const [inline]**

Get the pen's position in the buffer.

**pt3emReturns**

The pen's position as an **FTPoint** (p. 59) object.

Definition at line 63 of file FTBuffer.h.

**6.4.3.4 void FTBuffer::Pos ( FTPoint arg ) [inline]**

Set the pen's position in the buffer.

**pt3emParameters**

pt3em	pt3emarg	pt3emAn <b>FTPoint</b> (p. 59) object with the desired pen's position.
-------	----------	--

Definition at line 73 of file FTBuffer.h.

**6.4.3.5 void FTBuffer::Size ( int w, int h )**

Set the buffer's size.

pt3em

pt3emParameters

pt3em	pt3emw	pt3emThe buffer's desired width, in pixels.
	pt3emh	pt3emThe buffer's desired height, in pixels.

6.4.3.6 `int FTBuffer::Width ( ) const` `[inline]`

Get the buffer's width.

pt3emReturns

The buffer's width, in pixels.

Definition at line 91 of file FTBuffer.h.

The documentation for this class was generated from the following file:

- **FTBuffer.h**

## 6.5 FTBufferFont Class Reference

**FTBufferFont** (p. 31) is a specialisation of the **FTFont** (p. 37) class for handling memory buffer fonts.

```
#include <FTBufferFont.h>
```

Inheritance diagram for FTBufferFont:

pt3em

### Public Member Functions

- **FTBufferFont** (const char \*fontFilePath)  
*Open and read a font file.*
- **FTBufferFont** (const unsigned char \*pBufferBytes, size\_t bufferSizeInBytes)  
*Open and read a font from a buffer in memory.*
- **~FTBufferFont** ()  
*Destructor.*

### Protected Member Functions

- virtual **FTGlyph** \* **MakeGlyph** (FT\_GlyphSlot slot)  
*Construct a glyph of the correct type.*

pt3em

### 6.5.1 Detailed Description

**FTBufferFont** (p. 31) is a specialisation of the **FTFont** (p. 37) class for handling memory buffer fonts.

pt3emSee also

**FTFont** (p. 37)

Definition at line 43 of file FTBufferFont.h.

### 6.5.2 Constructor & Destructor Documentation

#### 6.5.2.1 FTBufferFont::FTBufferFont ( const char \* *fontFilePath* )

Open and read a font file.

Sets Error flag.

@param fontFilePath font file path.

#### 6.5.2.2 FTBufferFont::FTBufferFont ( const unsigned char \* *pBufferBytes*, size\_t *bufferSizeInBytes* )

Open and read a font from a buffer in memory.

Sets Error flag. The buffer is owned by the client and is NOT copied by **FTGL** (p. 21). The pointer must be valid while using **FTGL** (p. 21).

pt3emParameters

pt3em	pt3em <i>pBufferBytes</i>	pt3emthe in-memory buffer
pt3em	<i>bufferSizeInBytes</i>	pt3emthe length of the buffer in bytes

#### 6.5.2.3 FTBufferFont::~~FTBufferFont ( )

Destructor.

### 6.5.3 Member Function Documentation

#### 6.5.3.1 virtual FTGlyph\* FTBufferFont::MakeGlyph ( FT.GlyphSlot *slot* ) [protected], [virtual]

Construct a glyph of the correct type.

Clients must override the function and return their specialised **FTGlyph** (p. 47).

pt3emParameters

pt3em	pt3ems <i>slot</i>	pt3emA FreeType glyph slot.
-------	--------------------	-----------------------------

pt3em

**pt3emReturns**

An FT\*\*\*\*Glyph or `null` on failure.

Implements **FTFont** (p. 45).

The documentation for this class was generated from the following file:

- **FTBufferFont.h**

## 6.6 FTBufferGlyph Class Reference

**FTBufferGlyph** (p. 33) is a specialisation of **FTGlyph** (p. 47) for memory buffer rendering.

```
#include <FTBufferGlyph.h>
```

Inheritance diagram for FTBufferGlyph:

### Additional Inherited Members

#### 6.8.1 Detailed Description

**FTExtrudeGlyph** (p. 36) is a specialisation of **FTGlyph** (p. 47) for creating tessellated extruded polygon glyphs.

Definition at line 43 of file FTExtrdGlyph.h.

#### 6.8.2 Constructor & Destructor Documentation

6.8.2.1 **FTExtrudeGlyph::FTExtrudeGlyph** ( FT\_GlyphSlot glyph, float depth, float frontOutset, float backOutset, bool useDisplayList )

Constructor.

Sets the Error to Invalid\_Outline if the glyph isn't an outline.

pt3em

pt3emParameters

pt3em <i>pt3emglyph</i>	pt3emThe Freetype glyph to be processed
pt3em <i>pt3emdepth</i>	pt3emThe distance along the z axis to extrude the glyph
pt3em <i>frontOutset</i>	pt3emoutset contour size
pt3em <i>backOutset</i>	pt3emoutset contour size
pt3em <i>useDisplayList</i>	pt3emEnable or disable the use of Display Lists for this glyph <code>true</code> turns ON display lists. <code>false</code> turns OFF display lists.

**6.8.2.2** virtual FTExtrudeGlyph::~~FTExtrudeGlyph ( ) [virtual]

Destructor.

### 6.8.3 Member Function Documentation

**6.8.3.1** virtual const FTPoint& FTExtrudeGlyph::Render ( const FTPoint & *pen*, int *renderMode* ) [virtual]

Render this glyph at the current pen position.

pt3emParameters

pt3em <i>pt3empen</i>	pt3emThe current pen position.
pt3em <i>renderMode</i>	pt3emRender mode to display

pt3emReturns

The advance distance for this glyph.

Implements **FTGlyph** (p. 49).

The documentation for this class was generated from the following file:

### 6.9.1 Detailed Description

**FTFont** (p. 37) is the public interface for the **FTGL** (p. 21) library.

Specific font classes are derived from this class. It uses the helper classes **FTFace** and **FTSize** to access the FreeType library. This class is abstract and deriving classes must implement the protected **MakeGlyph** function to create glyphs of the appropriate type.

It is good practice after using these functions to test the error code returned. **FT\_Error** **Error()** (p. 44). Check the freetype file `fterrdef.h` for error definitions.

pt3emSee also

**FTFace**  
**FTSize**

Definition at line 56 of file `FTFont.h`.

### 6.9.2 Constructor & Destructor Documentation

#### 6.9.2.1 FTFont::FTFont ( char const \* fontFilePath ) [protected]

Open and read a font file.

Sets Error flag.

@param fontFilePath font file path.

pt3em

### 6.9.2.2 FTFont::FTFont ( const unsigned char \* *pBufferBytes*, size\_t *bufferSizeInBytes* ) [protected]

Open and read a font from a buffer in memory.

Sets Error flag. The buffer is owned by the client and is NOT copied by **FTGL** (p. 21). The pointer must be valid while using **FTGL** (p. 21).

pt3emParameters

pt3em <i>pBufferBytes</i>	pt3emthe in-memory buffer
pt3em <i>bufferSizeInBytes</i>	pt3emthe length of the buffer in bytes

### 6.9.2.3 virtual FTFont::~~FTFont ( ) [virtual]

## 6.9.3 Member Function Documentation

### 6.9.3.1 virtual float FTFont::Advance ( const char \* *string*, const int *len* = -1, **FTPoint** *spacing* = **FTPoint** ( ) ) [virtual]

Get the advance for a string.

pt3emParameters

pt3em <i>string</i>	pt3em'C' style string to be checked.
pt3em <i>len</i>	pt3emThe length of the string. If < 0 then all characters will be checked until a null character is encountered (optional).
pt3em <i>spacing</i>	pt3emA displacement vector to add after each character has been checked (optional).

pt3emReturns

The string's advance width.

### 6.9.3.2 virtual float FTFont::Advance ( const wchar\_t \* *string*, const int *len* = -1, **FTPoint** *spacing* = **FTPoint** ( ) ) [virtual]

Get the advance for a string.

pt3emParameters

pt3em <i>string</i>	pt3emA wchar_t string
pt3em <i>len</i>	pt3emThe length of the string. If < 0 then all characters will be checked until a null character is encountered (optional).
pt3em <i>spacing</i>	pt3emA displacement vector to add after each character has been checked (optional).

pt3emReturns

The string's advance width.

pt3em

### 6.9.3.3 virtual float FTFont::Ascender ( ) const [virtual]

Get the global ascender height for the face.

pt3emReturns

Ascender height

### 6.9.3.4 virtual bool FTFont::Attach ( const char \* *fontFilePath* ) [virtual]

Attach auxilliary file to font e.g font metrics.

Note: not all font formats implement this function.

pt3emParameters

pt3em	pt3em <i>fontFilePath</i>	pt3emauxilliary font file path.
-------	------------------------------	---------------------------------

pt3emReturns

`true` if file has been attached successfully.

### 6.9.3.5 virtual bool FTFont::Attach ( const unsigned char \* *pBufferBytes*, size\_t *bufferSizeInBytes* ) [virtual]

Attach auxilliary data to font e.g font metrics, from memory.

Note: not all font formats implement this function.

pt3emParameters

pt3em	pt3em <i>pBufferBytes</i>	pt3emthe in-memory buffer.
pt3em	<i>bufferSizeInBytes</i>	pt3emthe length of the buffer in bytes.

pt3emReturns

`true` if file has been attached successfully.

### 6.9.3.6 virtual FTBBBox FTFont::BBox ( const char \* *string*, const int *len* = -1, FTPoint *position* = FTPoint ( ) , FTPoint *spacing* = FTPoint ( ) ) [virtual]

Get the bounding box for a string.

pt3emParameters

pt3em	pt3em <i>string</i>	pt3emA char buffer.
	pt3em <i>len</i>	pt3emThe length of the string. If < 0 then all characters will be checked until a null character is encountered (optional).
	pt3em <i>position</i>	pt3emThe pen position of the first character (optional).
	pt3em <i>spacing</i>	pt3emA displacement vector to add after each character has been checked (optional).

pt3em

#### pt3emReturns

The corresponding bounding box.

Referenced by BBox().

```
6.9.3.7 void FTFont::BBox ( const char * string, float & llx, float & lly, float & llz, float & urx, float & ury, float & urz )
        [inline]
```

Get the bounding box for a string (deprecated).

#### pt3emParameters

pt3em <i>pt3emstring</i>	pt3emA char buffer.
pt3em <i>llx</i>	pt3emLower left near x coordinate.
pt3em <i>lly</i>	pt3emLower left near y coordinate.
pt3em <i>llz</i>	pt3emLower left near z coordinate.
pt3em <i>urx</i>	pt3emUpper right far x coordinate.
pt3em <i>ury</i>	pt3emUpper right far y coordinate.
pt3em <i>urz</i>	pt3emUpper right far z coordinate.

Definition at line 251 of file FTFont.h.

References BBox(), FTBBox::Lower(), FTBBox::Upper(), FTPoint::Xf(), FTPoint::Yf(), and FTPoint::Zf().

```
6.9.3.8 virtual FTBBox FTFont::BBox ( const wchar_t * string, const int len = -1, FTPoint position = FTPoint ( ) ,
        FTPoint spacing = FTPoint ( ) ) [virtual]
```

Get the bounding box for a string.

#### pt3emParameters

pt3em <i>pt3emstring</i>	pt3emA wchar_t buffer.
pt3em <i>len</i>	pt3emThe length of the string. If < 0 then all characters will be checked until a null character is encountered (optional).
pt3em <i>position</i>	pt3emThe pen position of the first character (optional).
pt3em <i>spacing</i>	pt3emA displacement vector to add after each character has been checked (optional).

#### pt3emReturns

The corresponding bounding box.

```
6.9.3.9 void FTFont::BBox ( const wchar_t * string, float & llx, float & lly, float & llz, float & urx, float & ury, float & urz )
        [inline]
```

Get the bounding box for a string (deprecated).

#### pt3emParameters

pt3em <i>pt3emstring</i>	pt3emA wchar_t buffer.
pt3em <i>llx</i>	pt3emLower left near x coordinate.

## pt3em

pt3em//y	pt3emLower left near y coordinate.
pt3em//z	pt3emLower left near z coordinate.
pt3emurx	pt3emUpper right far x coordinate.
pt3emury	pt3emUpper right far y coordinate.
pt3emurz	pt3emUpper right far z coordinate.

Definition at line 286 of file FTFont.h.

References BBox(), FTBBBox::Lower(), FTBBBox::Upper(), FTPoint::Xf(), FTPoint::Yf(), and FTPoint::Zf().

### 6.9.3.10 virtual bool FTFont::CharMap ( FT\_Encoding *encoding* ) [virtual]

Set the character map for the face.

## pt3emParameters

pt3emencoding	pt3emFreetype enumerate for char map code.
---------------	--

## pt3emReturns

true if charmap was valid and set correctly.

### 6.9.3.11 virtual unsigned int FTFont::CharMapCount ( ) const [virtual]

Get the number of character maps in this face.

## pt3emReturns

character map count.

### 6.9.3.12 virtual FT\_Encoding\* FTFont::CharMapList ( ) [virtual]

Get a list of character maps in this face.

## pt3emReturns

pointer to the first encoding.

### 6.9.3.13 virtual void FTFont::Depth ( float *depth* ) [virtual]

Set the extrusion distance for the font.

Only implemented by **FTExtrudeFont** (p. 34)

## pt3emParameters

pt3em pt3emdepth	pt3emThe extrusion distance.
------------------	------------------------------

pt3em

**6.9.3.14** `virtual float FTFont::Descender ( ) const [virtual]`

Gets the global descender height for the face.

**pt3emReturns**

Descender height

**6.9.3.15** `virtual FT_Error FTFont::Error ( ) const [virtual]`

Queries the Font for errors.

**pt3emReturns**

The current error code.

**6.9.3.16** `virtual bool FTFont::FaceSize ( const unsigned int size, const unsigned int res = 72 ) [virtual]`

Set the char size for the current face.

**pt3emParameters**

pt3em	pt3emsize	pt3emthe face size in points (1/72 inch)
	pt3emres	pt3emthe resolution of the target device.

**pt3emReturns**

true if size was set correctly

**6.9.3.17** `virtual unsigned int FTFont::FaceSize ( ) const [virtual]`

Get the current face size in points (1/72 inch).

**pt3emReturns**

face size

**6.9.3.18** `virtual void FTFont::GlyphLoadFlags ( FT_Int flags ) [virtual]`

Set the glyph loading flags.

By default, fonts use the most sensible flags when loading a font's glyph using FT\_Load\_Glyph(). This function allows to override the default flags.

**pt3emParameters**

pt3em	pt3emflags	pt3emThe glyph loading flags.
-------	------------	-------------------------------

pt3em

**6.9.3.19** virtual float FTFont::LineHeight ( ) const [virtual]

Gets the line spacing for the font.

pt3emReturns

Line height

**6.9.3.20** virtual FTGlyph\* FTFont::MakeGlyph ( FT\_GlyphSlot slot ) [protected],[pure virtual]

Construct a glyph of the correct type.

Clients must override the function and return their specialised **FTGlyph** (p. 47).

pt3emParameters

pt3em	pt3ems/ot	pt3emA FreeType glyph slot.
-------	-----------	-----------------------------

pt3emReturns

An FT\*\*\*\*Glyph or null on failure.

Implemented in **FTEXtrudeFont** (p. 35), **FTBitmapFont** (p. 27), **FTOutlineFont** (p. 54), **FTPixmapFont** (p. 58), **FTPolygonFont** (p. 67), **FTTextureFont** (p. 74), and **FTBufferFont** (p. 32).

**6.9.3.21** virtual void FTFont::Outset ( float outset ) [virtual]

Set the outset distance for the font.

Only implemented by **FTOutlineFont** (p. 53), **FTPolygonFont** (p. 65) and **FTEXtrudeFont** (p. 34)

pt3emParameters

pt3empt3emoutset	pt3emThe outset distance.
------------------	---------------------------

**6.9.3.22** virtual void FTFont::Outset ( float front, float back ) [virtual]

Set the front and back outset distances for the font.

Only implemented by **FTEXtrudeFont** (p. 34)

pt3emParameters

pt3em	pt3emfront	pt3emThe front outset distance.
	pt3emback	pt3emThe back outset distance.

**6.9.3.23** virtual FTPoint FTFont::Render ( const char \* string, const int len = -1, FTPoint position = FTPoint ( ) , FTPoint spacing = FTPoint ( ) , int renderMode = FTGL::RENDER\_ALL ) [virtual]

Render a string of characters.

pt3em

pt3emParameters

pt3em pt3emstring	pt3em'C' style string to be output.
pt3em len	pt3emThe length of the string. If < 0 then all characters will be displayed until a null character is encountered (optional).
pt3em position	pt3emThe pen position of the first character (optional).
pt3em spacing	pt3emA displacement vector to add after each character has been displayed (optional).
pt3em renderMode	pt3emRender mode to use for display (optional).

pt3emReturns

The new pen position after the last character was output.

```
6.9.3.24 virtual FTPoint FTFont::Render ( const wchar_t* string, const int len = -1, FTPoint position = FTPoint ( ),
FTPoint spacing = FTPoint ( ) , int renderMode = FTGL::RENDER_ALL ) [virtual]
```

Render a string of characters.

pt3emParameters

pt3em pt3emstring	pt3emwchar_t string to be output.
pt3em len	pt3emThe length of the string. If < 0 then all characters will be displayed until a null character is encountered (optional).
pt3em position	pt3emThe pen position of the first character (optional).
pt3em spacing	pt3emA displacement vector to add after each character has been displayed (optional).
pt3em renderMode	pt3emRender mode to use for display (optional).

pt3emReturns

The new pen position after the last character was output.

```
6.9.3.25 virtual void FTFont::UseDisplayList ( bool useList ) [virtual]
```

Enable or disable the use of Display Lists inside **FTGL** (p. 21).

pt3emParameters

pt3em pt3emuseList	pt3emtrue turns ON display lists. false turns OFF display lists.
--------------------	--

### 6.11.2 Constructor & Destructor Documentation

6.11.2.1 **FTLayout::FTLayout** ( ) [protected]

6.11.2.2 **virtual FTLayout::~~FTLayout** ( ) [virtual]

Destructor.

### 6.11.3 Member Function Documentation

6.11.3.1 **virtual FTBBBox FTLayout::BBox** ( const char \* *string*, const int *len* = -1, **FTPoint** *position* = **FTPoint** ( ) )  
[pure virtual]

Get the bounding box for a formatted string.

pt3em

pt3emParameters

pt3em <i>pt3emstring</i>	pt3emA char string.
<i>pt3emlen</i>	pt3emThe length of the string. If < 0 then all characters will be checked until a null character is encountered (optional).
<i>pt3emposition</i>	pt3emThe pen position of the first character (optional).

pt3emReturns

The corresponding bounding box.

Implemented in **FTSimpleLayout** (p. 70).

**6.11.3.2** `virtual FTBBBox FTLLayout::BBox ( const wchar_t * string, const int len = -1, FTPoint position = FTPoint ( ) )`  
[pure virtual]

Get the bounding box for a formatted string.

pt3emParameters

pt3em <i>pt3emstring</i>	pt3emA wchar_t string.
<i>pt3emlen</i>	pt3emThe length of the string. If < 0 then all characters will be checked until a null character is encountered (optional).
<i>pt3emposition</i>	pt3emThe pen position of the first character (optional).

pt3emReturns

The corresponding bounding box.

Implemented in **FTSimpleLayout** (p. 70).

**6.11.3.3** `virtual FT_Error FTLLayout::Error ( ) const` [virtual]

Queries the Layout for errors.

pt3emReturns

The current error code.

**6.11.3.4** `virtual void FTLLayout::Render ( const char * string, const int len = -1, FTPoint position = FTPoint ( ), int renderMode = FTGL::RENDER_ALL )` [pure virtual]

Render a string of characters.

pt3emParameters

pt3em <i>pt3emstring</i>	pt3em'C' style string to be output.
<i>pt3emlen</i>	pt3emThe length of the string. If < 0 then all characters will be displayed until a null character is encountered (optional).
<i>pt3emposition</i>	pt3emThe pen position of the first character (optional).
<i>pt3emrenderMode</i>	pt3emRender mode to display (optional)

pt3em

pt3em pt3emGenerated on Sun Apr 28 2013 19:57:35 for FTGL by Doxygen

pt3em

Implemented in **FTSimpleLayout** (p. 71).

```
6.11.3.5 virtual void FTLayout::Render ( const wchar_t* string, const int len = -1, FTPoint position = FTPoint (), int
      renderMode = FTGL::RENDER_ALL ) [pure virtual]
```

Render a string of characters.

pt3emParameters

pt3em <i>pt3emstring</i>	pt3emwchar_t string to be output.
<i>pt3emlen</i>	pt3emThe length of the string. If < 0 then all characters will be displayed until a null character is encountered (optional).
<i>pt3emposition</i>	pt3emThe pen position of the first character (optional).
<i>pt3emrenderMode</i>	pt3emRender mode to display (optional)

Implemented in **FTSimpleLayout** (p. 71).

### 6.12.2 Constructor & Destructor Documentation

#### 6.12.2.1 FTOutlineFont::FTOutlineFont ( const char \* *fontFilePath* )

Open and read a font file.

Sets Error flag.

@param fontFilePath font file path.

#### 6.12.2.2 FTOutlineFont::FTOutlineFont ( const unsigned char \* *pBufferBytes*, size\_t *bufferSizeInBytes* )

Open and read a font from a buffer in memory.

Sets Error flag. The buffer is owned by the client and is NOT copied by **FTGL** (p. 21). The pointer must be valid while using **FTGL** (p. 21).

pt3emParameters

pt3em <i>pBufferBytes</i>	pt3emthe in-memory buffer
pt3em <i>bufferSizeInBytes</i>	pt3emthe length of the buffer in bytes

#### 6.12.2.3 FTOutlineFont::~FTOutlineFont ( )

Destructor.

### 6.12.3 Member Function Documentation

#### 6.12.3.1 virtual FTGlyph\* FTOutlineFont::MakeGlyph ( FT\_GlyphSlot *slot* ) [protected], [virtual]

Construct a glyph of the correct type.

Clients must override the function and return their specialised **FTGlyph** (p. 47).

pt3em

pt3emParameters

pt3em	pt3ems/of	pt3emA FreeType glyph slot.
-------	-----------	-----------------------------

pt3emReturns

An FT\*\*\*\*Glyph or `null` on failure.

Implements **FTFont** (p. 45).

The documentation for this class was generated from the following file:

- **FTGLOutlineFont.h**

## 6.13 FTOutlineGlyph Class Reference

**FTOutlineGlyph** (p. 55) is a specialisation of **FTGlyph** (p. 47) for creating outlines.

```
#include <FTOutlineGlyph.h>
```

Inheritance diagram for FTOutlineGlyph:

### Additional Inherited Members

#### 6.13.1 Detailed Description

**FTOutlineGlyph** (p. 55) is a specialisation of **FTGlyph** (p. 47) for creating outlines.

Definition at line 42 of file FTOutlineGlyph.h.

#### 6.13.2 Constructor & Destructor Documentation

##### 6.13.2.1 FTOutlineGlyph::FTOutlineGlyph ( FT\_GlyphSlot glyph, float outset, bool useDisplayList )

Constructor.

Sets the Error to Invalid\_Outline if the glyphs isn't an outline.

pt3em

pt3emParameters

pt3em <i>pt3emglyph</i>	pt3emThe Freetype glyph to be processed
<i>pt3emoutset</i>	pt3emoutset distance
pt3em <i>useDisplayList</i>	pt3emEnable or disable the use of Display Lists for this glyph <code>true</code> turns ON display lists. <code>false</code> turns OFF display lists.

6.13.2.2 `virtual FTOutlineGlyph::~~FTOutlineGlyph ( ) [virtual]`

Destructor.

### 6.13.3 Member Function Documentation

6.13.3.1 `virtual const FTPoint& FTOutlineGlyph::Render ( const FTPoint & pen, int renderMode ) [virtual]`

Render this glyph at the current pen position.

pt3emParameters

pt3em <i>pt3empen</i>	pt3emThe current pen position.
<i>pt3emrenderMode</i>	pt3emRender mode to display

pt3emReturns

The advance distance for this glyph.

Implements **FTGlyph** (p. 49).

The documentation for this class was generated from the following file:

- **FTOutlineGlyph.h**

## 6.14 FTPixmapFont Class Reference

**FTPixmapFont** (p. 56) is a specialisation of the **FTFont** (p. 37) class for handling Pixmap (Grey Scale) fonts.

```
#include <FTGLPixmapFont.h>
```

Inheritance diagram for FTPixmapFont:

pt3em

### Public Member Functions

- **FTPixmapFont** (const char \*fontFilePath)

pt3em

*Open and read a font file.*

*Open and read a font from a buffer in memory.*

- **~FTPixmapFont** ()

*Destructor.*

## Protected Member Functions

- virtual **FTGlyph \*** **MakeGlyph** (FT\_GlyphSlot slot)

*Construct a glyph of the correct type.*

### 6.14.1 Detailed Description

**FTPixmapFont** (p. 56) is a specialisation of the **FTFont** (p. 37) class for handling Pixmap (Grey Scale) fonts.

pt3emSee also

**FTFont** (p. 37)

Definition at line 45 of file FTGLPixmapFont.h.

### 6.14.2 Constructor & Destructor Documentation

#### 6.14.2.1 FTPixmapFont::FTPixmapFont ( const char \* *fontFilePath* )

Open and read a font file.

Sets Error flag.

@param fontFilePath font file path.

#### 6.14.2.2 FTPixmapFont::FTPixmapFont ( const unsigned char \* *pBufferBytes*, size\_t *bufferSizeInBytes* )

Open and read a font from a buffer in memory.

Sets Error flag. The buffer is owned by the client and is NOT copied by **FTGL** (p. 21). The pointer must be valid while using **FTGL** (p. 21).

pt3emParameters

pt3em	pt3em	pt3emthe in-memory buffer
	<i>pBufferBytes</i>	
pt3em	<i>bufferSizeInBytes</i>	pt3emthe length of the buffer in bytes

#### 6.14.2.3 FTPixmapFont::~~FTPixmapFont ( )

Destructor.

### 6.14.3 Member Function Documentation

pt3em

#### 6.14.3.1 virtual FTGlyph\* FTPixmapFont::MakeGlyph ( FT\_GlyphSlot slot ) [protected],[virtual]

Construct a glyph of the correct type.

Clients must override the function and return their specialised **FTGlyph** (p. 47).

pt3emParameters

pt3em	pt3ems/ot	pt3emA FreeType glyph slot.
-------	-----------	-----------------------------

pt3emReturns

An FT\*\*\*\*Glyph or `null` on failure.

Implements **FTFont** (p. 45).

The documentation for this class was generated from the following file:

- **FTGLPixmapFont.h**

## 6.15 FTPixmapGlyph Class Reference

**FTPixmapGlyph** (p. 58) is a specialisation of **FTGlyph** (p. 47) for creating pixmaps.

```
#include <FTPixmapGlyph.h>
```

Inheritance diagram for FTPixmapGlyph:

pt3em

### Public Member Functions

### 6.16.1 Detailed Description

**FTPoint** (p. 59) class is a basic 3-dimensional point or vector.

Definition at line 42 of file FTPoint.h.

pt3em

## 6.16.2 Constructor & Destructor Documentation

### 6.16.2.1 FTPoint::FTPoint ( ) [inline]

Default constructor.

Point is set to zero.

Definition at line 48 of file FTPoint.h.

### 6.16.2.2 FTPoint::FTPoint ( const FTGL\_DOUBLE x, const FTGL\_DOUBLE y, const FTGL\_DOUBLE z = 0 ) [inline]

Constructor.

Z coordinate is set to zero if unspecified.

```
@param x First component
@param y Second component
@param z Third component
```

Definition at line 62 of file FTPoint.h.

### 6.16.2.3 FTPoint::FTPoint ( const FT\_Vector & *ft\_vector* ) [inline]

Constructor.

This converts an FT\_Vector to an **FTPoint** (p. 59)

```
@param ft_vector A freetype vector
```

Definition at line 75 of file FTPoint.h.

## 6.16.3 Member Function Documentation

### 6.16.3.1 FTPoint FTPoint::Normalise ( )

Normalise a point's coordinates.

If the coordinates are zero, the point is left untouched.

pt3emReturns

A vector of norm one.

### 6.16.3.2 FTPoint::operator const FTGL\_DOUBLE \* ( ) const [inline]

Cast to FTGL\_DOUBLE\*.

Definition at line 240 of file FTPoint.h.

### 6.16.3.3 FTPoint FTPoint::operator\* ( double *multiplier* ) const [inline]

Operator \* Scalar multiplication.

pt3em

pt3emParameters

pt3em	pt3emmultiplier	pt3em
-------	-----------------	-------

pt3emReturns

this multiplied by multiplier.

Definition at line 159 of file FTPoint.h.

**6.16.3.4** **FTPoint** FTPoint::operator+ ( const FTPoint & *point* ) const [inline]

Operator +.

pt3emParameters

pt3em	pt3empoint	pt3em
-------	------------	-------

pt3emReturns

this plus point.

Definition at line 112 of file FTPoint.h.

**6.16.3.5** **FTPoint&** FTPoint::operator+= ( const FTPoint & *point* ) [inline]

Operator += In Place Addition.

pt3emParameters

pt3em	pt3empoint	pt3em
-------	------------	-------

pt3emReturns

this plus point.

Definition at line 97 of file FTPoint.h.

**6.16.3.6** **FTPoint** FTPoint::operator- ( const FTPoint & *point* ) const [inline]

Operator -.

pt3emParameters

pt3em	pt3empoint	pt3em
-------	------------	-------

pt3em

#### pt3emReturns

this minus point.

Definition at line 143 of file FTPoint.h.

#### 6.16.3.7 FTPoint& FTPoint::operator-= ( const FTPoint & *point* ) [inline]

Operator -= In Place Substraction.

#### pt3emParameters

pt3em	pt3em <i>point</i>	pt3em
-------	--------------------	-------

#### pt3emReturns

this minus point.

Definition at line 128 of file FTPoint.h.

#### 6.16.3.8 FTPoint FTPoint::operator^ ( const FTPoint & *point* ) [inline]

Operator ^ Vector product.

#### pt3emParameters

pt3em	pt3em <i>point</i>	pt3emSecond point
-------	--------------------	-------------------

#### pt3emReturns

this vector point.

Definition at line 204 of file FTPoint.h.

#### 6.16.3.9 void FTPoint::X ( FTGL\_DOUBLE *x* ) [inline]

Setters.

Definition at line 249 of file FTPoint.h.

Referenced by FTBBox::operator|=( ).

#### 6.16.3.10 FTGL\_DOUBLE FTPoint::X ( ) const [inline]

Getters.

Definition at line 257 of file FTPoint.h.

Referenced by FTFont::BBox( ).

**6.16.4 Friends And Related Function Documentation****6.16.4.1** `bool operator!= ( const FTPoint & a, const FTPoint & b ) [friend]`

Operator != Tests for non equality.

**pt3emParameters**

pt3em	pt3ema	pt3em
	pt3emb	pt3em

**pt3emReturns**

true if a &amp; b are not equal

**6.16.4.2** `FTPoint operator* ( double multiplier, FTPoint & point ) [friend]`

Operator \* Scalar multiplication.

pt3em

pt3emParameters

pt3em	pt3empoint	pt3em
	pt3emmultiplier	pt3em

pt3emReturns

multiplier multiplied by point.

Definition at line 177 of file FTPoint.h.

**6.16.4.3** `double operator* ( FTPoint & a, FTPoint & b )` `[friend]`

Operator \* Scalar product.

pt3emParameters

pt3em	pt3ema	pt3emFirst vector.
	pt3emb	pt3emSecond vector.

pt3emReturns

a . b scalar product.

Definition at line 190 of file FTPoint.h.

**6.16.4.4** `bool operator==( const FTPoint & a, const FTPoint & b )` `[friend]`

Operator == Tests for equality.

pt3emParameters

pt3em	pt3ema	pt3em
	pt3emb	pt3em

pt3emReturns

true if a & b are equal

### 6.17.1 Detailed Description

**FTPolygonFont** (p. 65) is a specialisation of the **FTFont** (p. 37) class for handling tessellated Polygon Mesh fonts.

pt3emSee also

**FTFont** (p. 37)

Definition at line 45 of file FTGLPolygonFont.h.

### 6.17.2 Constructor & Destructor Documentation

#### 6.17.2.1 FTPolygonFont::FTPolygonFont ( const char \* fontFilePath )

Open and read a font file.

Sets Error flag.

@param fontFilePath font file path.

#### 6.17.2.2 FTPolygonFont::FTPolygonFont ( const unsigned char \* pBufferBytes, size\_t bufferSizeInBytes )

Open and read a font from a buffer in memory.

Sets Error flag. The buffer is owned by the client and is NOT copied by **FTGL** (p. 21). The pointer must be valid while using **FTGL** (p. 21).

pt3emParameters

pt3em	pt3em	pt3emthe in-memory buffer
	<i>pBufferBytes</i>	
pt3em	pt3em	pt3emthe length of the buffer in bytes
<i>bufferSizeInBytes</i>		

pt3em

### 6.17.2.3 FTPolygonFont::~~FTPolygonFont ( )

Destructor.

## 6.17.3 Member Function Documentation

### 6.17.3.1 virtual FTGlyph\* FTPolygonFont::MakeGlyph ( FT\_GlyphSlot *slot* ) [protected], [virtual]

Construct a glyph of the correct type.

Clients must override the function and return their specialised **FTGlyph** (p. 47).

pt3emParameters

pt3em	pt3ems/ <i>ot</i>	pt3emA FreeType glyph slot.
-------	-------------------	-----------------------------

pt3emReturns

An FT\*\*\*\*Glyph or `null` on failure.

Implements **FTFont** (p. 45).

The documentation for this class was generated from the following file:

- **FTGLPolygonFont.h**

## 6.18 FTPolygonGlyph Class Reference

**FTPolygonGlyph** (p. 67) is a specialisation of **FTGlyph** (p. 47) for creating tessellated polygon glyphs.

### Additional Inherited Members

#### 6.19.1 Detailed Description

**FTSimpleLayout** (p. 69) is a specialisation of **FTLayout** (p. 50) for simple text boxes.

This class has basic support for text wrapping, left, right and centered alignment, and text justification.

pt3em

pt3emSee also

**FTLayout** (p. 50)

Definition at line 49 of file FTSimpleLayout.h.

## 6.19.2 Constructor & Destructor Documentation

### 6.19.2.1 FTSimpleLayout::FTSimpleLayout ( )

Initializes line spacing to 1.0, alignment to ALIGN\_LEFT and wrap to 100.0.

### 6.19.2.2 FTSimpleLayout::~~FTSimpleLayout ( )

Destructor.

## 6.19.3 Member Function Documentation

### 6.19.3.1 virtual FTBBBox FTSimpleLayout::BBox ( const char \* *string*, const int *len* = -1, FTPoint *position* = FTPoint ( ) ) [virtual]

Get the bounding box for a formatted string.

pt3emParameters

pt3em <i>pt3emstring</i>	pt3emA char string.
pt3em <i>pt3emlen</i>	pt3emThe length of the string. If < 0 then all characters will be checked until a null character is encountered (optional).
pt3em <i>pt3emposition</i>	pt3emThe pen position of the first character (optional).

pt3emReturns

The corresponding bounding box.

Implements **FTLayout** (p. 51).

### 6.19.3.2 virtual FTBBBox FTSimpleLayout::BBox ( const wchar\_t \* *string*, const int *len* = -1, FTPoint *position* = FTPoint ( ) ) [virtual]

Get the bounding box for a formatted string.

pt3emParameters

pt3em <i>pt3emstring</i>	pt3emA wchar_t string.
pt3em <i>pt3emlen</i>	pt3emThe length of the string. If < 0 then all characters will be checked until a null character is encountered (optional).
pt3em <i>pt3emposition</i>	pt3emThe pen position of the first character (optional).

pt3em

pt3emReturns

The corresponding bounding box.

Implements **FTLayout** (p. 52).

**6.19.3.3 FTGL::TextAlignment FTSimpleLayout::GetAlignment ( ) const**

pt3emReturns

The text alignment mode.

**6.19.3.4 FTFont\* FTSimpleLayout::GetFont ( )**

pt3emReturns

The current font.

**6.19.3.5 float FTSimpleLayout::GetLineLength ( ) const**

pt3emReturns

The current line length.

**6.19.3.6 float FTSimpleLayout::GetLineSpacing ( ) const**

pt3emReturns

The line spacing.

**6.19.3.7 virtual void FTSimpleLayout::Render ( const char \* *string*, const int *len* = -1, FTPoint *position* = FTPoint ( ), int *renderMode* = FTGL::RENDER\_ALL ) [virtual]**

Render a string of characters.

pt3emParameters

pt3em <i>pt3emstring</i>	pt3em'C' style string to be output.
pt3em <i>pt3emlen</i>	pt3emThe length of the string. If < 0 then all characters will be displayed until a null character is encountered (optional).
pt3em <i>pt3emposition</i>	pt3emThe pen position of the first character (optional).
pt3em <i>pt3emrenderMode</i>	pt3emRender mode to display (optional)

Implements **FTLayout** (p. 52).

**6.19.3.8 virtual void FTSimpleLayout::Render ( const wchar\_t \* *string*, const int *len* = -1, FTPoint *position* = FTPoint ( ), int *renderMode* = FTGL::RENDER\_ALL ) [virtual]**

Render a string of characters.

pt3em

pt3emParameters

pt3em pt3emstring	pt3emwchar_t string to be output.
pt3em len	pt3emThe length of the string. If < 0 then all characters will be displayed until a null character is encountered (optional).
pt3em position	pt3emThe pen position of the first character (optional).
pt3em renderMode	pt3emRender mode to display (optional)

Implements **FTLayout** (p. 53).

6.19.3.9 void FTSimpleLayout::SetAlignment ( const FTGL::TextAlignment *Alignment* )

The text alignment mode used to distribute space within a line or rendered text.

pt3emParameters

pt3em Alignment	pt3emThe new alignment mode.
-----------------	------------------------------

6.19.3.10 void FTSimpleLayout::SetFont ( FTFont \* *fontInit* )

Set the font to use for rendering the text.

pt3emParameters

pt3em pt3emfontInit	pt3emA pointer to the new font. The font is referenced by this but will not be disposed of when this is deleted.
---------------------	--

6.19.3.11 void FTSimpleLayout::SetLineLength ( const float *LineLength* )

The maximum line length for formatting text.

pt3emParameters

pt3em pt3em LineLength	pt3emThe new line length.
------------------------	---------------------------

6.19.3.12 void FTSimpleLayout::SetLineSpacing ( const float *LineSpacing* )

Sets the line height.

pt3emParameters

pt3em pt3em LineSpacing	pt3emThe height of each line of text expressed as a percentage of the current fonts line height.
-------------------------	--

*Construct a glyph of the correct type.*

#### 6.20.1 Detailed Description

**FTTextureFont** (p. 73) is a specialisation of the **FTFont** (p. 37) class for handling Texture mapped fonts.

pt3emSee also

**FTFont** (p. 37)

Definition at line 45 of file FTGLTextureFont.h.

#### 6.20.2 Constructor & Destructor Documentation

##### 6.20.2.1 FTTextureFont::FTTextureFont ( const char \* fontFilePath )

Open and read a font file.

Sets Error flag.

@param fontFilePath font file path.

pt3em

#### 6.20.2.2 FTTextureFont::FTTextureFont ( const unsigned char \* *pBufferBytes*, size\_t *bufferSizeInBytes* )

Open and read a font from a buffer in memory.

Sets Error flag. The buffer is owned by the client and is NOT copied by **FTGL** (p. 21). The pointer must be valid while using **FTGL** (p. 21).

pt3emParameters

pt3em	pt3em	pt3emthe in-memory buffer
	<i>pBufferBytes</i>	
pt3em	<i>bufferSizeInBytes</i>	pt3emthe length of the buffer in bytes

#### 6.20.2.3 virtual FTTextureFont::~~FTTextureFont ( ) [virtual]

Destructor.

### 6.20.3 Member Function Documentation

#### 6.20.3.1 virtual FTGlyph\* FTTextureFont::MakeGlyph ( FT\_GlyphSlot *slot* ) [protected],[virtual]

Construct a glyph of the correct type.

Clients must override the function and return their specialised **FTGlyph** (p. 47).

pt3emParameters

pt3em	pt3em <i>slot</i>	pt3emA FreeType glyph slot.
-------	-------------------	-----------------------------

pt3emReturns

An FT\*\*\*Glyph or `null` on failure.

Implements **FTFont** (p. 45).

The documentation for this class was generated from the following file:

- **FTGLTextureFont.h**

## 6.21 FTTextureGlyph Class Reference

**FTTextureGlyph** (p. 74) is a specialisation of **FTGlyph** (p. 47) for creating texture glyphs.

```
#include <FTTextureGlyph.h>
```

Inheritance diagram for FTTextureGlyph:

pt3em

pt3em

## Public Member Functions

- **FTTextureGlyph** (FT\_GlyphSlot glyph, int id, int xOffset, int yOffset, int width, int height)  
*Constructor.*
- virtual **~FTTextureGlyph** ()  
*Destructor.*
- virtual const **FTPoint & Render** (const **FTPoint** &pen, int renderMode)  
*Render this glyph at the current pen position.*

## Additional Inherited Members

### 6.21.1 Detailed Description

**FTTextureGlyph** (p. 74) is a specialisation of **FTGlyph** (p. 47) for creating texture glyphs.

Definition at line 43 of file FTTextureGlyph.h.

### 6.21.2 Constructor & Destructor Documentation

#### 6.21.2.1 FTTextureGlyph::FTTextureGlyph ( FT\_GlyphSlot glyph, int id, int xOffset, int yOffset, int width, int height )

Constructor.

pt3emParameters

pt3em pt3emglyph	pt3emThe Freetype glyph to be processed
pt3emid	pt3emThe id of the texture that this glyph will be drawn in
pt3emxOffset	pt3emThe x offset into the parent texture to draw this glyph
pt3emyOffset	pt3emThe y offset into the parent texture to draw this glyph
pt3emwidth	pt3emThe width of the parent texture
pt3emheight	pt3emThe height (number of rows) of the parent texture

#### 6.21.2.2 virtual FTTextureGlyph::~~FTTextureGlyph ( ) [virtual]

Destructor.

### 6.21.3 Member Function Documentation

#### 6.21.3.1 virtual const FTPoint& FTTextureGlyph::Render ( const FTPoint & pen, int renderMode ) [virtual]

Render this glyph at the current pen position.

pt3em

pt3emParameters

pt3em	<i>pt3em</i> <i>pen</i>	pt3emThe current pen position.
	<i>pt3em</i> <i>renderMode</i>	pt3emRender mode to display

pt3emReturns

The advance distance for this glyph.

Implements **FTGlyph** (p. 49).

The documentation for this class was generated from the following file:

- **FTTextureGlyph.h**

## Chapter 7

# File Documentation

### 7.1 faq.dox File Reference

### 7.2 FTBBox.h File Reference

```
#include <FTGL/ftgl.h>
```

#### Data Structures

- class **FTBBox**

***FTBBox** (p. 23) is a convenience class for handling bounding boxes.*

### 7.3 FTBitmapGlyph.h File Reference

```
#include <FTGL/ftgl.h>
```

#### Data Structures

- class **FTBitmapGlyph**

***FTBitmapGlyph** (p. 27) is a specialisation of **FTGlyph** (p. 47) for creating bitmaps.*

#### Functions

- **FTGLglyph \* ftglCreateBitmapGlyph** (FT\_GlyphSlot glyph)

*Create a specialisation of **FTGLglyph** for creating bitmaps.*

#### 7.3.1 Function Documentation

##### 7.3.1.1 FTGLglyph\* ftglCreateBitmapGlyph ( FT\_GlyphSlot glyph )

Create a specialisation of **FTGLglyph** for creating bitmaps.

pt3em

pt3emParameters

pt3em	pt3emglyph	pt3emThe Freetype glyph to be processed
-------	------------	---

pt3emReturns

An FTGLglyph\* object.

## 7.4 FTBuffer.h File Reference

```
#include <FTGL/ftgl.h>
```

### Data Structures

- class **FTBuffer**

*FTBuffer* (p. 29) is a helper class for pixel buffers.

## 7.5 FTBufferFont.h File Reference

```
#include <FTGL/ftgl.h>
```

### Data Structures

- class **FTBufferFont**

*FTBufferFont* (p. 31) is a specialisation of the *FTFont* (p. 37) class for handling memory buffer fonts.

### Functions

- **FTGLfont \* ftglCreateBufferFont** (const char \*file)

Create a specialised FTGLfont object for handling memory buffer fonts.

### 7.5.1 Function Documentation

#### 7.5.1.1 FTGLfont\* ftglCreateBufferFont ( const char \* file )

Create a specialised FTGLfont object for handling memory buffer fonts.

pt3emParameters

pt3em	pt3emfile	pt3emThe font file name.
-------	-----------	--------------------------

pt3emReturns

An FTGLfont\* object.

pt3em

pt3emSee also

**FTGLfont** (p. 81)

## 7.6 FTBufferGlyph.h File Reference

```
#include <FTGL/ftgl.h>
```

### Data Structures

- class **FTBufferGlyph**

*FTBufferGlyph* (p. 33) is a specialisation of *FTGlyph* (p. 47) for memory buffer rendering.

## 7.7 FTEXtrdGlyph.h File Reference

```
#include <FTGL/ftgl.h>
```

### Data Structures

- class **FTEXtrudeGlyph**

*FTEXtrudeGlyph* (p. 36) is a specialisation of *FTGlyph* (p. 47) for creating tessellated extruded polygon glyphs.

### Macros

- `#define FTEXtrdGlyph FTEXtrudeGlyph`

### Functions

- **FTGLglyph \* ftglCreateExtrudeGlyph** (FT\_GlyphSlot glyph, float depth, float frontOutset, float backOutset, int useDisplayList)

Create a specialisation of *FTGLglyph* for creating tessellated extruded polygon glyphs.

#### 7.7.1 Macro Definition Documentation

##### 7.7.1.1 #define FTEXtrdGlyph FTEXtrudeGlyph

Definition at line 77 of file FTEXtrdGlyph.h.

#### 7.7.2 Function Documentation

##### 7.7.2.1 FTGLglyph\* ftglCreateExtrudeGlyph ( FT\_GlyphSlot glyph, float depth, float frontOutset, float backOutset, int useDisplayList )

Create a specialisation of *FTGLglyph* for creating tessellated extruded polygon glyphs.

pt3em

pt3emParameters

pt3em <i>pt3emglyph</i>	pt3emThe Freetype glyph to be processed
<i>pt3emdepth</i>	pt3emThe distance along the z axis to extrude the glyph
<i>pt3emfrontOutset</i>	pt3emoutset contour size
<i>pt3embackOutset</i>	pt3emoutset contour size
<i>pt3emuseDisplayList</i>	pt3emEnable or disable the use of Display Lists for this glyph <code>true</code> turns ON display lists. <code>false</code> turns OFF display lists.

pt3emReturns

An FTGLglyph\* object.

## 7.8 FTFont.h File Reference

```
#include <FTGL/ftgl.h>
```

### Data Structures

- class **FTFont**  
*FTFont* (p. 37) is the public interface for the **FTGL** (p. 21) library.

### Typedefs

- typedef struct \_FTGLfont **FTGLfont**

### Functions

- FTGLfont \* ftglCreateCustomFont** (char const \*fontFilePath, void \*data, **FTGLglyph** \*(\*makeglyph-Callback)(FT\_GlyphSlot, void \*))  
*Create a custom FTGL (p. 21) font object.*
- void **ftglDestroyFont** (**FTGLfont** \*font)  
*Destroy an FTGL (p. 21) font object.*
- int **ftglAttachFile** (**FTGLfont** \*font, const char \*path)  
*Attach auxilliary file to font e.g.*
- int **ftglAttachData** (**FTGLfont** \*font, const unsigned char \*data, size\_t size)  
*Attach auxilliary data to font, e.g.*
- int **ftglSetFontCharMap** (**FTGLfont** \*font, FT\_Encoding encoding)  
*Set the character map for the face.*
- unsigned int **ftglGetFontCharMapCount** (**FTGLfont** \*font)  
*Get the number of character maps in this face.*
- FT\_Encoding \* **ftglGetFontCharMapList** (**FTGLfont** \*font)  
*Get a list of character maps in this face.*
- int **ftglSetFontFaceSize** (**FTGLfont** \*font, unsigned int size, unsigned int res)  
*Set the char size for the current face.*
- unsigned int **ftglGetFontFaceSize** (**FTGLfont** \*font)

pt3em

*Get the current face size in points (1/72 inch).*

- void **ftglSetFontDepth** (**FTGLfont** \*font, float depth)  
*Set the extrusion distance for the font.*
- void **ftglSetFontOutset** (**FTGLfont** \*font, float front, float back)  
*Set the outset distance for the font.*
- void **ftglSetFontDisplayList** (**FTGLfont** \*font, int useList)  
*Enable or disable the use of Display Lists inside **FTGL** (p. 21).*
- float **ftglGetFontAscender** (**FTGLfont** \*font)  
*Get the global ascender height for the face.*
- float **ftglGetFontDescender** (**FTGLfont** \*font)  
*Gets the global descender height for the face.*
- float **ftglGetFontLineHeight** (**FTGLfont** \*font)  
*Gets the line spacing for the font.*
- void **ftglGetFontBBox** (**FTGLfont** \*font, const char \*string, int len, float bounds[6])  
*Get the bounding box for a string.*
- float **ftglGetFontAdvance** (**FTGLfont** \*font, const char \*string)  
*Get the advance width for a string.*
- void **ftglRenderFont** (**FTGLfont** \*font, const char \*string, int mode)  
*Render a string of characters.*
- FT\_Error **ftglGetFontError** (**FTGLfont** \*font)  
*Query a font for errors.*

## 7.8.1 Typedef Documentation

### 7.8.1.1 typedef struct \_FTGLfont FTGLfont

Definition at line 399 of file FTFont.h.

## 7.8.2 Function Documentation

### 7.8.2.1 int ftglAttachData ( **FTGLfont** \* font, const unsigned char \* data, size\_t size )

Attach auxilliary data to font, e.g.

font metrics, from memory.

Note: not all font formats implement this function.

pt3emParameters

pt3em	pt3emfont	pt3emAn FTGLfont* object.
	pt3emdata	pt3emThe in-memory buffer.
	pt3emsize	pt3emThe length of the buffer in bytes.

pt3emReturns

1 if file has been attached successfully.

### 7.8.2.2 int ftglAttachFile ( **FTGLfont** \* font, const char \* path )

Attach auxilliary file to font e.g.

pt3em

font metrics.

Note: not all font formats implement this function.

pt3emParameters

pt3em	pt3emfont	pt3emAn FTGLfont* object.
	pt3empath	pt3emAuxilliary font file path.

pt3emReturns

1 if file has been attached successfully.

**7.8.2.3 FTGLfont\* ftglCreateCustomFont ( char const \* fontFilePath, void \* data, FTGLglyph (\*)(FT\_GlyphSlot, void \*) makeglyphCallback )**

Create a custom **FTGL** (p. 21) font object.

pt3emParameters

pt3em	pt3emfontFilePath	pt3emThe font file name.
	pt3emdata	pt3emA pointer to private data that will be passed to callbacks.
	pt3emmakeglyphCallback	pt3emA glyph-making callback function.

pt3emReturns

An FTGLfont\* object.

**7.8.2.4 void ftglDestroyFont ( FTGLfont \* font )**

Destroy an **FTGL** (p. 21) font object.

pt3emParameters

pt3em	pt3emfont	pt3emAn FTGLfont* object.
-------	-----------	---------------------------

**7.8.2.5 float ftglGetFontAdvance ( FTGLfont \* font, const char \* string )**

Get the advance width for a string.

pt3emParameters

pt3em	pt3emfont	pt3emAn FTGLfont* object.
	pt3emstring	pt3emA char string.

pt3em

pt3emReturns

Advance width

#### 7.8.2.6 float ftglGetFontAscender ( FTGLfont \* *font* )

Get the global ascender height for the face.

pt3emParameters

pt3em	pt3emfont	pt3emAn FTGLfont* object.
-------	-----------	---------------------------

pt3emReturns

Ascender height

#### 7.8.2.7 void ftglGetFontBBox ( FTGLfont \* *font*, const char \* *string*, int *len*, float *bounds*[6] )

Get the bounding box for a string.

pt3emParameters

pt3em	pt3emfont	pt3emAn FTGLfont* object.
	pt3emstring	pt3emA char buffer
	pt3emlen	pt3emThe length of the string. If < 0 then all characters will be checked until a null character is encountered (optional).
	pt3embounds	pt3emAn array of 6 float values where the bounding box's lower left near and upper right far 3D coordinates will be stored.

#### 7.8.2.8 unsigned int ftglGetFontCharMapCount ( FTGLfont \* *font* )

Get the number of character maps in this face.

pt3emParameters

pt3em	pt3emfont	pt3emAn FTGLfont* object.
-------	-----------	---------------------------

pt3emReturns

character map count.

#### 7.8.2.9 FT\_Encoding\* ftglGetFontCharMapList ( FTGLfont \* *font* )

Get a list of character maps in this face.

pt3emParameters

pt3em	pt3emfont	pt3emAn FTGLfont* object.
-------	-----------	---------------------------

pt3em

pt3emReturns

pointer to the first encoding.

#### 7.8.2.10 float ftglGetFontDescender ( FTGLfont \* font )

Gets the global descender height for the face.

pt3emParameters

pt3em	pt3emfont	pt3emAn FTGLfont* object.
-------	-----------	---------------------------

pt3emReturns

Descender height

#### 7.8.2.11 FT\_Error ftglGetFontError ( FTGLfont \* font )

Query a font for errors.

pt3emParameters

pt3em	pt3emfont	pt3emAn FTGLfont* object.
-------	-----------	---------------------------

pt3emReturns

The current error code.

#### 7.8.2.12 unsigned int ftglGetFontFaceSize ( FTGLfont \* font )

Get the current face size in points (1/72 inch).

pt3emParameters

pt3em	pt3emfont	pt3emAn FTGLfont* object.
-------	-----------	---------------------------

pt3emReturns

face size

#### 7.8.2.13 float ftglGetFontLineHeight ( FTGLfont \* font )

Gets the line spacing for the font.

pt3emParameters

pt3em	pt3emfont	pt3emAn FTGLfont* object.
-------	-----------	---------------------------

pt3em

pt3emReturns

Line height

**7.8.2.14** void ftglRenderFont ( FTGLfont \* *font*, const char \* *string*, int *mode* )

Render a string of characters.

pt3emParameters

pt3em	pt3em <i>font</i>	pt3emAn FTGLfont* object.
	pt3em <i>string</i>	pt3emChar string to be output.
	pt3em <i>mode</i>	pt3emRender mode to display.

**7.8.2.15** int ftglSetFontCharMap ( FTGLfont \* *font*, FT\_Encoding *encoding* )

Set the character map for the face.

pt3emParameters

pt3em	pt3em <i>font</i>	pt3emAn FTGLfont* object.
	pt3em <i>encoding</i>	pt3emFreetype enumerate for char map code.

pt3emReturns

1 if charmap was valid and set correctly.

**7.8.2.16** void ftglSetFontDepth ( FTGLfont \* *font*, float *depth* )

Set the extrusion distance for the font.

Only implemented by **FTExtrudeFont** (p. 34).

pt3emParameters

pt3em	pt3em <i>font</i>	pt3emAn FTGLfont* object.
	pt3em <i>depth</i>	pt3emThe extrusion distance.

**7.8.2.17** void ftglSetFontDisplayList ( FTGLfont \* *font*, int *useList* )

Enable or disable the use of Display Lists inside **FTGL** (p. 21).

pt3emParameters

pt3em	pt3em <i>font</i>	pt3emAn FTGLfont* object.
	pt3em <i>useList</i>	pt3em1 turns ON display lists. 0 turns OFF display lists.

pt3em

**7.8.2.18 int ftglSetFontFaceSize ( FTGLfont \* font, unsigned int size, unsigned int res )**

Set the char size for the current face.

pt3emParameters

pt3em	pt3emfont	pt3emAn FTGLfont* object.
	pt3emsize	pt3emThe face size in points (1/72 inch).
	pt3emres	pt3emThe resolution of the target device, or 0 to use the default value of 72.

pt3emReturns

1 if size was set correctly.

**7.8.2.19 void ftglSetFontOutset ( FTGLfont \* font, float front, float back )**

Set the outset distance for the font.

Only **FTOutlineFont** (p. 53), **FTPolygonFont** (p. 65) and **FTExtrudeFont** (p. 34) implement front outset. Only **FTExtrudeFont** (p. 34) implements back outset.

pt3emParameters

pt3em	pt3emfont	pt3emAn FTGLfont* object.
	pt3emfront	pt3emThe front outset distance.
	pt3emback	pt3emThe back outset distance.

***FTTextureFont** (p. 73) is a specialisation of the **FTFont** (p. 37) class for handling Texture mapped fonts.*

### Macros

- **#define FTGLTextureFont FTTextureFont**

### Functions

- **FTGLfont \* ftglCreateTextureFont** (const char \*file)

*Create a specialised FTGLfont object for handling texture-mapped fonts.*

#### 7.16.1 Macro Definition Documentation

##### 7.16.1.1 #define FTGLTextureFont FTTextureFont

Definition at line 84 of file FTGLTextureFont.h.

#### 7.16.2 Function Documentation

##### 7.16.2.1 FTGLfont\* ftglCreateTextureFont ( const char \* file )

Create a specialised FTGLfont object for handling texture-mapped fonts.

pt3emParameters

pt3em	pt3emfile	pt3emThe font file name.
-------	-----------	--------------------------

pt3emReturns

An FTGLfont\* object.

pt3emSee also

**FTGLfont** (p. 81)

## 7.17 FTGlyph.h File Reference

```
#include <FTGL/ftgl.h>
```

pt3em

## Data Structures

- class **FTGlyph**

**FTGlyph** (p. 47) is the base class for **FTGL** (p. 21) glyphs.

## Typedefs

- typedef struct \_FTGLglyph **FTGLglyph**

## Functions

- FTGLglyph \* ftglCreateCustomGlyph** (**FTGLglyph** \*base, void \*data, void(\*renderCallback)(**FTGLglyph** \*, void \*, **FTGL\_DOUBLE**, **FTGL\_DOUBLE**, int, **FTGL\_DOUBLE** \*, **FTGL\_DOUBLE** \*), void(\*destroyCallback)(**FTGLglyph** \*, void \*))  
Create a custom **FTGL** (p. 21) glyph object.
- void **ftglDestroyGlyph** (**FTGLglyph** \*glyph)  
Destroy an **FTGL** (p. 21) glyph object.
- void **ftglRenderGlyph** (**FTGLglyph** \*glyph, **FTGL\_DOUBLE** penx, **FTGL\_DOUBLE** peny, int renderMode, **FTGL\_DOUBLE** \*advancex, **FTGL\_DOUBLE** \*advancey)  
Render a glyph at the current pen position and compute the corresponding advance.
- float **ftglGetGlyphAdvance** (**FTGLglyph** \*glyph)  
Return the advance for a glyph.
- void **ftglGetGlyphBBox** (**FTGLglyph** \*glyph, float bounds[6])  
Return the bounding box for a glyph.
- FT\_Error **ftglGetGlyphError** (**FTGLglyph** \*glyph)  
Query a glyph for errors.

### 7.17.1 Typedef Documentation

#### 7.17.1.1 typedef struct \_FTGLglyph FTGLglyph

Definition at line 133 of file FTGlyph.h.

### 7.17.2 Function Documentation

#### 7.17.2.1 FTGLglyph\* ftglCreateCustomGlyph ( FTGLglyph \* base, void \* data, void(\*)(FTGLglyph \*, void \*, FTGL\_DOUBLE, FTGL\_DOUBLE, int, FTGL\_DOUBLE \*, FTGL\_DOUBLE \*) renderCallback, void(\*)(FTGLglyph \*, void \*) destroyCallback )

Create a custom **FTGL** (p. 21) glyph object.

FIXME: maybe get rid of "base" and have advanceCallback etc. functions

#### pt3emParameters

pt3em	pt3embase	pt3emThe base FTGLglyph* to subclass.
	pt3emdata	pt3emA pointer to private data that will be passed to callbacks.
	pt3emrenderCallback	pt3emA rendering callback function.
	pt3emdestroyCallback	pt3emA callback function to be called upon destruction.

pt3em

pt3em pt3emGenerated on Sun Apr 28 2013 19:57:35 for FTGL by Doxygen

pt3em

pt3emReturns

An FTGLglyph\* object.

#### 7.17.2.2 void ftglDestroyGlyph ( FTGLglyph \* *glyph* )

Destroy an **FTGL** (p. 21) glyph object.

pt3emParameters

pt3em pt3emglyph	pt3emAn FTGLglyph* object.
------------------	----------------------------

#### 7.17.2.3 float ftglGetGlyphAdvance ( FTGLglyph \* *glyph* )

Return the advance for a glyph.

pt3emParameters

pt3em pt3emglyph	pt3emAn FTGLglyph* object.
------------------	----------------------------

pt3emReturns

The advance's X component.

#### 7.17.2.4 void ftglGetGlyphBBox ( FTGLglyph \* *glyph*, float *bounds*[6] )

Return the bounding box for a glyph.

pt3emParameters

pt3em pt3emglyph	pt3emAn FTGLglyph* object.
pt3embounds	pt3emAn array of 6 float values where the bounding box's lower left near and upper right far 3D coordinates will be stored.

#### 7.17.2.5 FT\_Error ftglGetGlyphError ( FTGLglyph \* *glyph* )

Query a glyph for errors.

pt3emParameters

pt3em pt3emglyph	pt3emAn FTGLglyph* object.
------------------	----------------------------

pt3emReturns

The current error code.

pt3em

**7.17.2.6** void ftglRenderGlyph ( FTGLglyph \* *glyph*, FTGL\_DOUBLE *penx*, FTGL\_DOUBLE *peny*, int *renderMode*, FTGL\_DOUBLE \* *advancex*, FTGL\_DOUBLE \* *advancey* )

Render a glyph at the current pen position and compute the corresponding advance.

pt3emParameters

pt3em <i>pt3emglyph</i>	pt3emAn FTGLglyph* object.
<i>pt3empenx</i>	pt3emThe current pen's X position.
<i>pt3empeny</i>	pt3emThe current pen's Y position.
<i>pt3emrenderMode</i>	pt3emRender mode to display
<i>pt3emadvancex</i>	pt3emA pointer to an FTGL_DOUBLE where to write the advance's X component.
<i>pt3emadvancey</i>	pt3emA pointer to an FTGL_DOUBLE where to write the advance's Y component.

## 7.18 FTLayout.h File Reference

```
#include <FTGL/ftgl.h>
```

### Data Structures

- class **FTLayout**

***FTLayout** (p. 50) is the interface for layout managers that render text.*

### Typedefs

- typedef struct \_FTGLlayout **FTGLlayout**

### Functions

- void **ftglDestroyLayout** (FTGLlayout \*layout)  
*Destroy an **FTGL** (p. 21) layout object.*
- void **ftglGetLayoutBBox** (FTGLlayout \*layout, const char \*string, float bounds[6])  
*Get the bounding box for a string.*
- void **ftglRenderLayout** (FTGLlayout \*layout, const char \*string, int mode)  
*Render a string of characters.*
- FT\_Error **ftglGetLayoutError** (FTGLlayout \*layout)  
*Query a layout for errors.*

#### 7.18.1 Typedef Documentation

##### 7.18.1.1 typedef struct \_FTGLlayout FTGLlayout

Definition at line 151 of file FTLayout.h.

pt3em

## 7.18.2 Function Documentation

### 7.18.2.1 void ftglDestroyLayout ( FTGLLayout \* layout )

Destroy an **FTGL** (p. 21) layout object.

pt3emParameters

pt3empt3em/layout	pt3emAn FTGLLayout* object.
-------------------	-----------------------------

### 7.18.2.2 void ftglGetLayoutBBBox ( FTGLLayout \* layout, const char \* string, float bounds[6] )

Get the bounding box for a string.

pt3emParameters

pt3empt3em/layout	pt3emAn FTGLLayout* object.
pt3emstring	pt3emA char buffer
pt3embounds	pt3emAn array of 6 float values where the bounding box's lower left near and upper right far 3D coordinates will be stored.

### 7.18.2.3 FT\_Error ftglGetLayoutError ( FTGLLayout \* layout )

Query a layout for errors.

pt3emParameters

pt3empt3em/layout	pt3emAn FTGLLayout* object.
-------------------	-----------------------------

pt3emReturns

The current error code.

### 7.18.2.4 void ftglRenderLayout ( FTGLLayout \* layout, const char \* string, int mode )

Render a string of characters.

pt3emParameters

pt3empt3em/layout	pt3emAn FTGLLayout* object.
pt3emstring	pt3emChar string to be output.
pt3emode	pt3emRender mode to display.

pt3em

## 7.19 FTOutlineGlyph.h File Reference

```
#include <FTGL/ftgl.h>
```

### Data Structures

- class **FTOutlineGlyph**

***FTOutlineGlyph** (p. 55) is a specialisation of **FTGlyph** (p. 47) for creating outlines.*

### Functions

- **FTGLglyph \* ftglCreateOutlineGlyph** (FT\_GlyphSlot glyph, float outset, int useDisplayList)

*Create a specialisation of FTGLglyph for creating outlines.*

#### 7.19.1 Function Documentation

##### 7.19.1.1 FTGLglyph\* ftglCreateOutlineGlyph ( FT\_GlyphSlot glyph, float outset, int useDisplayList )

Create a specialisation of FTGLglyph for creating outlines.

##### pt3emParameters

pt3em pt3emglyph	pt3emThe Freetype glyph to be processed
pt3emoutset	pt3emoutset contour size
pt3emuseDisplayList	pt3emEnable or disable the use of Display Lists for this glyph <code>true</code> turns ON display lists. <code>false</code> turns OFF display lists.

##### pt3emReturns

An FTGLglyph\* object.

## 7.20 FTPixmapGlyph.h File Reference

```
#include <FTGL/ftgl.h>
```

### Data Structures

- class **FTPixmapGlyph**

***FTPixmapGlyph** (p. 58) is a specialisation of **FTGlyph** (p. 47) for creating pixmaps.*

### Functions

- **FTGLglyph \* ftglCreatePixmapGlyph** (FT\_GlyphSlot glyph)

*Create a specialisation of FTGLglyph for creating pixmaps.*

pt3em

## 7.20.1 Function Documentation

### 7.20.1.1 FTGLglyph\* ftglCreatePixmapGlyph ( FT\_GlyphSlot *glyph* )

Create a specialisation of FTGLglyph for creating pixmaps.

pt3emParameters

pt3em <i>pt3emglyph</i>	pt3emThe Freetype glyph to be processed
-------------------------	---

pt3emReturns

An FTGLglyph\* object.

## 7.21 FTPoint.h File Reference

```
#include <FTGL/ftgl.h>
```

### Data Structures

- class **FTPoint**  
*FTPoint* (p. 59) class is a basic 3-dimensional point or vector.

## 7.22 FTPolyGlyph.h File Reference

```
#include <FTGL/ftgl.h>
```

### Data Structures

- class **FTPolygonGlyph**  
*FTPolygonGlyph* (p. 67) is a specialisation of **FTGlyph** (p. 47) for creating tessellated polygon glyphs.

### Macros

- **#define FTPolyGlyph FTPolygonGlyph**

### Functions

- **FTGLglyph \* ftglCreatePolygonGlyph** (FT\_GlyphSlot *glyph*, float *outset*, int *useDisplayList*)  
Create a specialisation of FTGLglyph for creating tessellated polygon glyphs.

## 7.22.1 Macro Definition Documentation

### 7.22.1.1 #define FTPolyGlyph FTPolygonGlyph

Definition at line 74 of file FTPolyGlyph.h.

## pt3em

## 7.22.2 Function Documentation

7.22.2.1 FTGLglyph\* ftglCreatePolygonGlyph ( FT\_GlyphSlot *glyph*, float *outset*, int *useDisplayList* )

Create a specialisation of FTGLglyph for creating tessellated polygon glyphs.

## pt3emParameters

pt3em <i>pt3emglyph</i>	pt3emThe Freetype glyph to be processed
<i>pt3emoutset</i>	pt3emoutset contour size
<i>pt3emuseDisplayList</i>	pt3emEnable or disable the use of Display Lists for this glyph <code>true</code> turns ON display lists. <code>false</code> turns OFF display lists.

## pt3emReturns

An FTGLglyph\* object.

## 7.23 FTSimpleLayout.h File Reference

```
#include <FTGL/ftgl.h>
```

## Data Structures

- class **FTSimpleLayout**

*FTSimpleLayout* (p. 69) is a specialisation of *FTLayout* (p. 50) for simple text boxes.

## Functions

- **FTGLlayout \* ftglCreateSimpleLayout** (void)
- void **ftglSetLayoutFont** (FTGLlayout \*, FTGLfont \*)
- **FTGLfont \* ftglGetLayoutFont** (FTGLlayout \*)
- void **ftglSetLayoutLineLength** (FTGLlayout \*, const float)
- float **ftglGetLayoutLineLength** (FTGLlayout \*)
- void **ftglSetLayoutAlignment** (FTGLlayout \*, const int)
- int **ftglGetLayoutAlignement** (FTGLlayout \*)
- void **ftglSetLayoutLineSpacing** (FTGLlayout \*, const float)
- float **ftglGetLayoutLineSpacing** (FTGLlayout \*)

## 7.23.1 Function Documentation

## 7.23.1.1 FTGLlayout\* ftglCreateSimpleLayout ( void )

## 7.23.1.2 int ftglGetLayoutAlignement ( FTGLlayout \* )

## 7.23.1.3 FTGLfont\* ftglGetLayoutFont ( FTGLlayout \* )

## 7.23.1.4 float ftglGetLayoutLineLength ( FTGLlayout \* )

pt3em

7.23.1.5 float ftglGetLayoutLineSpacing ( FTGLLayout \* )

7.23.1.6 void ftglSetLayoutAlignment ( FTGLLayout \* , const int )

7.23.1.7 void ftglSetLayoutFont ( FTGLLayout \* , FTGLfont \* )

7.23.1.8 void ftglSetLayoutLineLength ( FTGLLayout \* , const float )

7.23.1.9 void ftglSetLayoutLineSpacing ( FTGLLayout \* , const float )

## 7.24 FTTextureGlyph.h File Reference

```
#include <FTGL/ftgl.h>
```

### Data Structures

- class **FTTextureGlyph**

*FTTextureGlyph* (p. 74) is a specialisation of *FTGlyph* (p. 47) for creating texture glyphs.

### Functions

- FTGLglyph \* ftglCreateTextureGlyph** (FT\_GlyphSlot glyph, int id, int xOffset, int yOffset, int width, int height)

Create a specialisation of *FTGLglyph* for creating pixmaps.

### 7.24.1 Function Documentation

7.24.1.1 **FTGLglyph\* ftglCreateTextureGlyph** ( FT\_GlyphSlot *glyph*, int *id*, int *xOffset*, int *yOffset*, int *width*, int *height* )

Create a specialisation of *FTGLglyph* for creating pixmaps.

pt3emParameters

pt3em <i>pt3emglyph</i>	pt3emThe Freetype glyph to be processed.
<i>pt3emid</i>	pt3emThe id of the texture that this glyph will be drawn in.
<i>pt3emxOffset</i>	pt3emThe x offset into the parent texture to draw this glyph.
<i>pt3emyOffset</i>	pt3emThe y offset into the parent texture to draw this glyph.
<i>pt3emwidth</i>	pt3emThe width of the parent texture.
<i>pt3emheight</i>	pt3emThe height (number of rows) of the parent texture.

pt3emReturns

An *FTGLglyph\** object.
